Start here: open the review queue

GO Dancers & tables > Media approvals

1 Queue	2 Checklist	3 Decision	4 Release

Your first read: follow these 4 pages in order, then keep your matching one-page cheat sheet handy. Numbered arrows match the actions on each page.

1. Sign in and open club reviews. Use your own owner/manager account at www.mydancr.com > Sign in. Confirm the club, then open Dancers & tables > Media approvals. Staff cannot approve media. Reviewer assignment does not create a separate restricted role; ask the owner for missing access.

2. Refresh the queue. Select Refresh. New dancers join the club queue after their NFC tap. Check the count and use Previous / Next to work all pages (12 items per page).

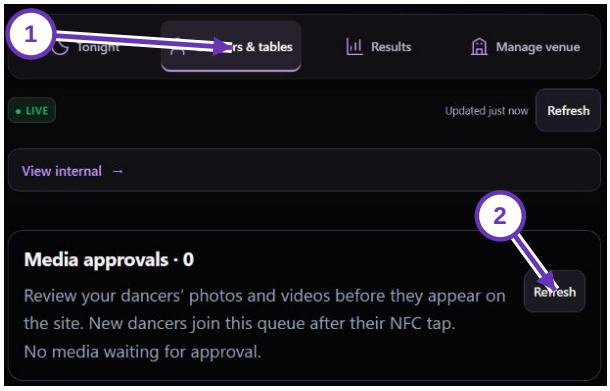

3. Identify the exact item. Read stage name and the Photo, Main photo, Avatar or Video label. Check the actual preview/version, not a previous upload.

4. Read AI findings. Check running, passed, flagged or manual-review status. Expand AI findings when present. Passing AI is not human approval or proof of identity/rights.

5. Review, then decide. Use the full checklist on guide p. 2 and the decision guide on p. 3. Never approve a missing preview or unfinished processing.

DONE WHEN You can inspect the correct item and understand any automated findings.

IF BLOCKED Disabled approval is not a control to work around. Leave an uninspectable item private and contact the club lead/platform team with the asset reference and error.

Captured 20 Oct 2026. Arrows match numbered steps.

WHEN UPLOADS ARRIVE

This capture shows an empty queue. Pending items add the asset preview, AI findings, Review note, Approve and Reject; Previous / Next appear for multiple pages. Those controls are described here, not shown in this capture.

AFTER A DECISION

Wait for the success message and removal from the pending queue. Returning to the first page is normal. An uncertain save requires Refresh before another action.

Photo and video review checklist

GO Use on every photo, main image, avatar and video

1 Queue | 2 Checklist | 3 Decision | 4 Release

1. Inspect the complete asset. Photo: whole frame plus final crop. Avatar: face visible. Video: play every scene with audio from beginning to end; do not approve from its thumbnail.

2. Check people and coverage. Only the uploader, age 18+, may appear, including in backgrounds/reflections. Apply the coverage rules below.

3. Check text, objects and audio. Look for brands, logos, watermarks, contact details, solicitation and other prohibited content. Listen to the complete audio.

4. Check rights and technical readiness. The uploader must own or have permission for all visuals/audio. Review AI findings. Do not override a technical block or guess about identity or rights.

Check	Approval standard
People	Uploader only, 18+. No other people or minors, including reflections/backgrounds.
Coverage	Bikinis, opaque lingerie, thongs and cleavage may be allowed. Cover nipples, areolas, genitals and anus. Thong-exposed buttocks may be allowed. No sex acts or masturbation.
Branding / contacts	No visible brands, logos or watermarks; no phone, email, social/payment handles or QR codes anywhere.
Conduct	No sexual solicitation, drug use/sales, graphic violence, weapon threats, self-harm, hate, harassment, threats, coercion, nonconsensual content or deceptive impersonation.
Rights / format	Own or have permission for all visuals and audio. Video: vertical/square MP4, WebM or MOV; 1-30 seconds; up to 25 MB. Do not bypass failed technical checks.

DONE WHEN Every checklist category has been inspected before a publishing decision.

IF BLOCKED Any uncertainty about people, age, consent, ownership or inspectability: keep the file private and escalate. AI findings are evidence to review, not a substitute for the checklist.

Approve, reject or escalate

GO Media approvals > Review note > decision

1. Choose the outcome. Escalate means leave the item private and contact the responsible team. It is not a dedicated queue button.

Decision	Use when	Action
APPROVE	All checks passed by the human reviewer; complete preview inspected; no unresolved issue.	Press **Approve** when enabled.
REJECT	A clear rule violation or correction is identified.	Write a specific **Review note**, then **Reject**.
ESCALATE	Missing preview, processing, uncertain age/identity/consent/rights, suspected abuse, or a changed upload.	Leave private. Contact the club lead/platform team. Refresh after the issue is resolved.

Write a correction the dancer can act on

"Another person appears in the mirror. Replace this with a photo showing only you."

"A visible logo appears on the clothing. Replace or edit the file so no logo remains."

"Your payment handle appears at 00:07. Remove it and submit a corrected video."

A rejection note needs at least 3 characters (maximum 4,000). Avoid vague notes such as "bad photo" or unsupported allegations.

2. Save once and verify. After Approve or Reject, wait for confirmation and removal from the pending queue. If the upload changed or the result is uncertain, Refresh and inspect the current version.

3. Review replacements anew. A corrected file is a new review. Inspect the replacement itself; do not approve solely because the previous note was addressed.

4. Check the release. After approval, inspect the eligible profile/internal/public surface. If still hidden, check remaining enrollment, verification, visibility and channel requirements.

DONE WHEN The saved outcome matches the exact file inspected, and unresolved content stays private.

IF BLOCKED One approval can release an asset across eligible internal, external and TV surfaces. It does not override profile eligibility.

Review every publishing surface

GO Release checklist beyond the media queue

1. Dancer media. New photos/videos require human approval, including main images and avatars. Existing approved assets are not automatically re-queued; audit them when a historical review is required.

2. Profile text. Stage name and city save in the profile workspace. Do not assume a separate human queue blocks every edit. Inspect live details and report misleading or prohibited text.

3. Social links. Send link-review questions to MyDancr Support. Include the dancer and link reference; club media approval does not approve a social link.

4. Venue pages and branding. The club reviews the official package and deal before Approve & make live. Venue logos/covers have separate processing rules; the dancer-media queue does not govern every branding edit. Coordinate with the club admin.

5. Live internal, external and TV views. After a release, check the correct person and approved content. Report unsafe live content to MyDancr Support for the applicable removal/restriction action.

DONE WHEN Each content type has a review owner and a verified release path.

IF BLOCKED Not every text/branding edit has a technical hold. Report unsafe live content immediately to MyDancr Support for removal/restriction; include a reference and exact issue without circulating sensitive media.

RELEASE CHECK

Correct club/person > correct approved version > intended visibility/channel > working media/links > no prohibited content.

AUDIT AND HANDOVER

Record club, asset reference, decision, factual reason, reviewer and time under your team procedure. For unresolved items add next action and owner. Do not copy sensitive source media into ordinary messages.

BEFORE INDEPENDENT REVIEW

Use approved training examples to demonstrate one permitted item, one correction and one escalation. Do not approve real content merely for practice. Use the complete checklist on p. 2.

Edition: 20 Oct 2026. Current club approval-queue capture; the queue was empty. Review-item controls use text references. Procedures follow the master manual source baseline abb9f3585. Recheck after workflow changes.
