Content approval

Assigned club owner or manager - review before release

App navigation reference; arrows match the numbered tasks below. Earlier screenshot layout.

1. Open the right queue. Dancers & tables > Media approvals > Refresh. Confirm club, dancer and asset label. New dancers enter the queue after their NFC tap.

2. Wait for a usable preview. Do not approve missing previews or processing items. Read AI status and expand AI findings. AI passing is not human approval.

3. Inspect all content. Photo: whole frame and crop. Video: every scene and all audio. Only the uploader; required body coverage; no logos, watermarks, contact details, other people or prohibited conduct. Escalate identity or rights doubts.

4. Save a clear decision. Compliant: Approve. Noncompliant: specific Review note > Reject. Wait for confirmation. If the result is uncertain, Refresh before acting again.

5. Verify and continue. Check eligible profile/internal/public views after approval. Use Previous / Next to review all queue pages. A replacement needs a fresh review.

Remember: One approval can release the asset across eligible surfaces. Text edits and venue branding do not all use this media queue; apply the separate release checklist.

Need help? Keep uncertain content private. Send club, dancer, upload reference and exact issue to the platform team; do not circulate sensitive source material.

Manual pp. 33-38 | www.mydancr.com | Keep this guide with your onboarding notes.
