Operations Manual

A practical guide to running the club, managing talent, maintaining dancer profiles and approving content.

01

Club Admin team
Access, venue publication, QR signs, stickers and platform coordination

02

Managers & talent management
Live roster, table requests, admissions, VIP, transport and results

03

Dancers
Onboarding, photos, videos, check-ins, visibility and activity

04

Content approval manager
Human review, rejection guidance and publication checks

Edition: 20 October 2026. Written against the current workspace implementation. Screenshots are real owner-supplied app captures, with arrows added for training; some show earlier layouts. New controls without a capture use clearly labeled control references.

Distribution: Keep this full manual with administrators and managers. Give dancers the dancer section and their one-page guide. Manager ranking information is restricted to club operations; no scoring formulas are disclosed here.

This guide describes app behavior and recommended operating routines. It does not change permissions, approve content or replace a club's admission and incident procedures.

Contents and task finder

Select a title in this PDF to jump to the procedure.

03 Access and visibility

04 Sign in and recover access

05 Club admin: daily control checks

06 Review and publish the venue page

07 Invite and manage the club team

08 Create table QR signs in bulk

09 Provision and support NFC stickers

10 Check internal and embedded views

11 Deals, finance and participation

12 Platform administrator workflow

13 Manager: open the shift

14 Manage the dancer roster

15 Handle table requests

16 Guest list and admission

17 Invite and manage VIP guests

18 Confirm or decline a VIP visit

19 Ride requests and shared contacts

20 Read manager results and ranks

21 Set notifications and manage the inbox

22 Close the shift and hand over

23 Dancer: create and maintain your profile

24 Choose the main photo and avatar

25 Upload and organize photos

26 Upload videos

27 Agreement and age verification

28 Tap the sticker and choose visibility

29 Manage Working now

30 Control visibility and share your profile

31 Read your activity analytics

32 Dancer alerts, account help and retries

33 Open the media approval queue

34 Review a photo before approval

35 Review a video before approval

36 Reject, resolve and verify publication

37 Review content beyond uploads

38 Troubleshoot and escalate

39 Training sign-off and edition notes

Use the arrows: A numbered circle points to the control used in that step. Controls vary by permission and status. Screenshot counts and names are examples. Example media and old approval badges are navigation references, not precedents for approving content under current rules.

Role shortcuts: Club Admin pp. 5-12 | Managers pp. 13-22 | Dancers pp. 23-32 | Content approval pp. 33-37. Access and support apply to everyone.

Access and visibility

Read before using the role guides

Choose access by responsibility. A club account is different from a MyDancr platform administrator account. Never share one login among a team.

1. Club owner. Controls the club team and participation. Can manage the venue, dancers and media reviews, and view finance and analytics.

2. Club manager / talent manager. Manages the venue, roster and media approvals, handles VIP and transport operations, and sees club analytics. Cannot invite or remove team members.

3. Club staff. Can use permitted day-to-day views, guest admission and check-in actions. Cannot approve media or manage team access. VIP, ride and contact panels require owner or manager access.

4. Dancer. Edits their own profile and media, completes onboarding, chooses check-in visibility and sees their own activity analytics.

5. Content approval manager. An operating responsibility assigned to a club owner or manager. There is no separate reviewer-only club role; that account has broader manager permissions.

6. Platform administrator. Uses the separate Admin dashboard for platform queues, club setup, QR and sticker provisioning, billing administration and escalations.

Check: Give each person the lowest role that covers the work they actually perform.

If something is wrong: Internal = the club/table roster. External = public discovery. Embedded = a club-branded view. Profile visibility, check-in channel and content approval are separate controls.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Owner: team + club operations
- Manager: club operations + media reviews
- Staff: limited operations
- Dancer: own profile + activity
- Platform admin: platform-wide tools

Sign in and recover access

www.mydancr.com > Sign in

Use the account and entrance that match your role. VIP guests have a dedicated entrance at www.mydancr.com/vip.

1. Enter the right account. Use the email linked to your club team or dancer profile. Confirm the club name or stage name after signing in.

2. Sign in. Enter the password and select Sign in. Follow any email confirmation or account setup instructions shown.

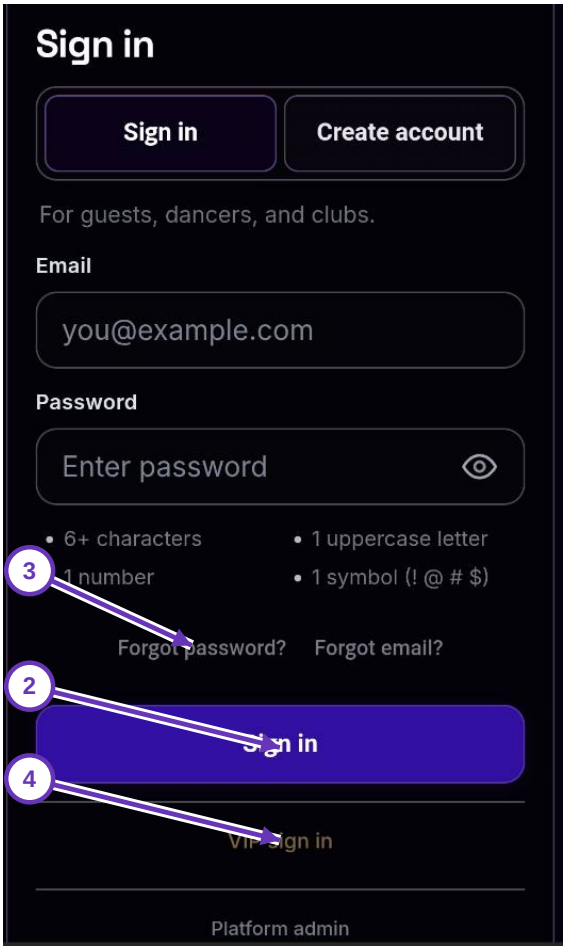

3. Recover access. Use Forgot password? or Forgot email? instead of creating another account. Open recovery messages only from your own mailbox.

4. Send VIP guests to VIP sign in. Use VIP sign in or /vip. General dashboard sign-in does not accept VIP accounts; redirect the guest to the dedicated area.

5. Use platform access only when assigned. Platform admin opens the separate administrative entrance. Club team members use the club dashboard.

Check: The dashboard shows the correct person, club and permitted navigation.

If something is wrong: Wrong dashboard or original-account warning: stop, sign out and recover the original account. Do not work around account binding by enrolling again.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Club admin: daily control checks

Club dashboard > Tonight / Manage venue

The club owner or administrator keeps access, public information and the operating team ready. Assign a named duty manager and a named media reviewer for each shift.

1. Confirm the venue. Check the club identity and publication status before changing anything. Use Refresh if the page shows an old update time.

2. Check Tonight. Review Working now, Table requests, Guest list, VIP requests and Ride requests. Hand urgent open work to the duty manager.

3. Open Manage venue. Review venue information, notifications, support and any prepared page awaiting your approval.

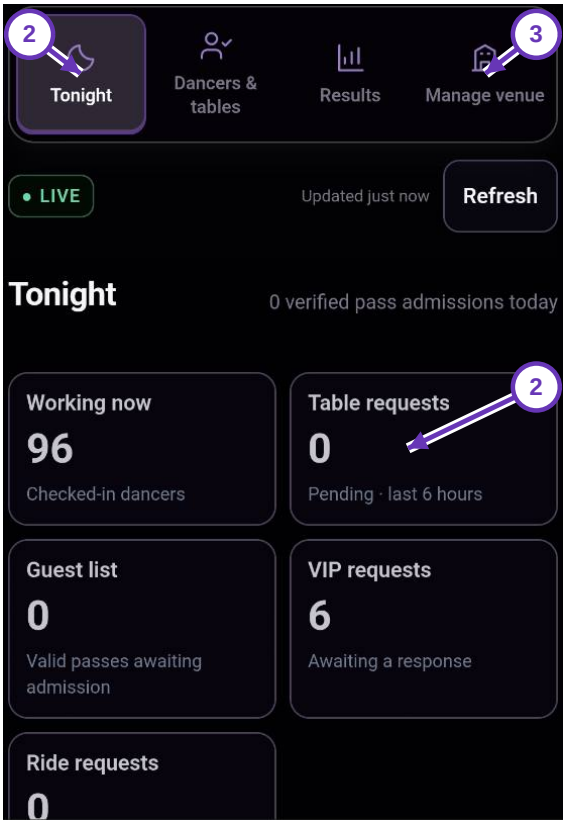

4. Review team coverage. Verify active managers and staff. Owners remove access promptly when someone leaves and revoke unused invitations.

5. Check review coverage. Make sure an owner or manager is handling Media approvals. Confirm the club has working table signs and a valid dressing-room sticker.

6. Review commercial status. Check the active Club Deal and subscription information. Resolve a hidden venue or an agreement mismatch before advertising the page.

Check: The venue is correct, queues have owners, and publication or access issues have a clear next action.

If something is wrong: A green status or an empty queue is not proof that a guest arrived or an upload was approved. Open the relevant record.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Review and publish the venue page

Manage venue > Review your prepared venue page

MyDancr prepares the venue package. An authorized club owner or manager reviews the facts and agreed terms before publication.

1. Read the official information. Check the exact location, venue name, address, telephone, website, opening hours and official logo.

2. Read the commercial package. Compare the customer offer, guest terms and subscription information with the club agreement. These fields are read-only in the approval package.

3. Preview customer experience. Open the preview. Check that the page belongs to the right location and that the offer, links and presentation match the approved package.

4. Request corrections when needed. Enter a specific explanation under Need changes? and choose Request changes. At least 10 characters are required. Wait for the revised package and review it again.

5. Approve & make live. Use this only when the whole package is correct. This is a publishing action. Wait for confirmation, then open the live venue page.

Check: The page shows LIVE and the customer page reflects the approved venue and offer.

If something is wrong: An approved venue can be hidden without an active Club Deal. Approval and affiliations are retained; resolve the deal status rather than rebuilding the club.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Official venue information
- Club Deal and subscription
- Need changes? [review notes]
- Request changes
- Preview customer experience
- Approve & make live

Invite and manage the club team

Manage venue > Team & activity

Only the owner manages team invitations and roles. Every person uses their own account so access can be removed without disrupting the rest of the team.

1. Choose the responsibility. Manager is for venue, roster, media and guest operations. Staff is for limited operational work. Do not assign manager solely to obtain a notification.

2. Invite a team member. Enter Team member email, choose the Access level and select Invite team member. Use an email suitable for a club team account; an existing dancer or guest account can conflict.

3. Complete invitation setup. The recipient opens the invitation and follows account setup. If email delivery fails and the dashboard supplies a secure invitation link, share it privately with the intended person.

4. Verify access. Ask the person to confirm the correct club and available tabs. Owners check that the membership is active.

5. Change or remove access. Use the member role control or Remove when duties change. Use Revoke for an invitation that should no longer be accepted.

Check: Only current staff have active memberships, and the owner can identify who holds manager access.

If something is wrong: Do not post invitation links in group chats or printed guides. Manager permission includes content approval and sensitive guest operations.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Team member email
- Access level: Manager / Staff
- Invite team member
- Pending invitation: Revoke
- Active member: role / Remove

Create table QR signs in bulk

Platform Admin > Clubs > club account > Table QR codes

The platform administrator provisions table QR codes for the club. The club team supplies the location and table numbering plan, then installs and checks the printed signs.

1. Specify the table numbers. Use Single table, Number range or the Tables 1-20 shortcut. For a custom range enter First and Last as positive whole numbers.

2. Check the inclusive count. 201 through 210 means 10 tables. 201 through 211 means 11 tables. Confirm the intended count before creating the batch.

3. Create the codes. Run the create action and check progress. Existing active Table N numbers are skipped. Stop after current table ends a batch safely if you entered the wrong range.

4. Print or download. Use Print all for the batch, or Download QR / Print QR sign for one table. Check each sign shows its table number, Powered by MyDancr and www.mydancr.com.

5. Verify installation. Check one sign at a time against the physical table. Open its link to verify the club and table identity before placing it. Keep a club copy of the table map.

6. Replace obsolete signs. Use Rename or Disable as appropriate. Remove old physical signs when a code is disabled; do not reuse a sign for a different table without verifying the link.

Check: Every installed QR sign opens the right club and table, and the printed label matches the actual table.

If something is wrong: Table QR signs are for guests. They do not replace the dressing-room NFC sticker used by dancers to check in.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Single table / Number range / Tables 1-20
- First: 201 Last: 210
- Create QR codes
- Print all
- Per table: Download QR / Print QR sign
- Copy link / Rename / Disable

Provision and support NFC stickers

Platform Admin > Clubs > Tap sticker inventory

The platform administrator assigns and replaces stickers. The club team installs them securely and uses the dashboard support controls when a sticker is not working.

1. Assign the correct location. Choose the venue, placement and sticker label in the inventory, then Assign sticker. Distinguish multiple locations of the same brand.

2. Program the physical tag. Use the supplied programming URL. Treat it as a private credential: it can be shown only once and must not appear in screenshots, public signs or shared documents.

3. Check before installation. Use the intended phone flow to verify that the sticker opens the correct venue and placement. Install the dancer check-in sticker in the designated dressing-room area.

4. Report a club issue. In Dancers & tables, find the sticker controls. Use Test for the displayed link check or Support to describe the Issue and Details, including the sticker label.

5. Replace a compromised tag. The platform administrator uses Disable or Replace when needed. Replacement revokes the old URL; remove the old physical tag and check the replacement.

Check: The correct club opens and the sticker label is recorded for future support.

If something is wrong: A tap does not bypass profile, approval, agreement or any required verification steps. Never send a programming URL to a dancer as a shortcut.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Venue + placement + sticker label
- Assign sticker
- Copy programming URL (private)
- Club tools: Test / Support
- Inventory: Enable / Disable / Replace

Check internal and embedded views

Club dashboard > View internal / venue customer page

Use the correct surface for the task. Club-branded customer views may look different from the full MyDancr profile used by dashboard staff.

1. Check the internal table view. Open View internal or the table QR link. Confirm club name, table number, roster and Request controls. Check the Powered by MyDancr attribution.

2. Check the public club view. Open the live venue page. Confirm location, active deal, directions and the eligible working roster.

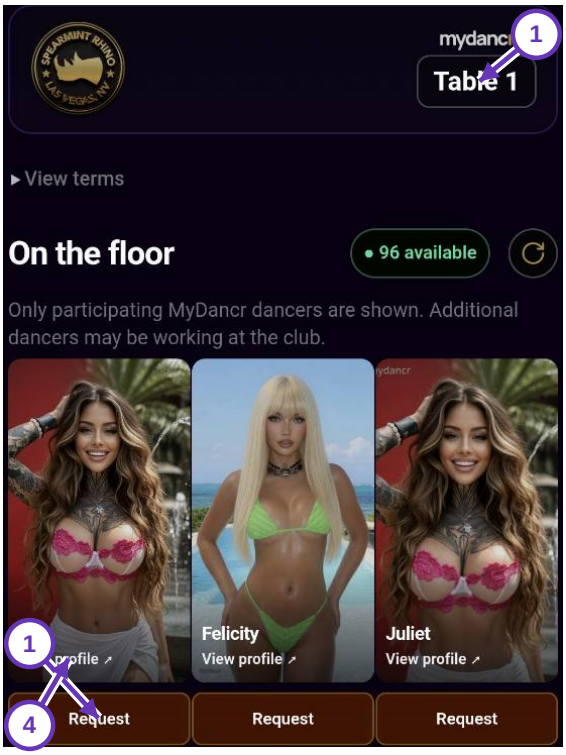

3. Check a branded embed. Ask the platform admin or website maintainer to use the current approved embed. Verify the location selector, brand accent, roster and profile links on the actual club website.

4. Open a dancer profile. Confirm the correct person, approved main image and approved media. Internal and external availability depend on the dancer channel and profile eligibility.

5. Report presentation issues. Include the entry point, club, device, time and a screenshot. If the wrong location or person appears, remove the affected link from use until corrected.

Check: The viewer stays in the right club context and only eligible, approved content appears.

If something is wrong: A branded embedded profile intentionally omits follow, share and follower-count controls. A staff dashboard full profile can retain MyDancr styling and operational information.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Deals, finance and participation

Manage venue > club information / deals / finance

Use the dashboard to review the club arrangement and request changes. Commercial information is specific to the club and must match the agreed package.

1. Review the active offer. Check the displayed Club Deal, terms and eligibility. Train the admission team on the current offer rather than relying on a saved screenshot.

2. Request a deal correction. Owners and managers can request deal changes through the available club controls or Support. Give the exact desired terms and effective date.

3. Review finance access. Owners and managers can view the club finance information. Platform Billing handles venue subscription administration. Do not treat performance metrics as an invoice.

4. Resolve a hidden venue. Check whether the club lacks an active deal. The venue can be hidden while dancer accounts and media remain live; contact the platform team to correct the commercial status.

5. Handle club withdrawal carefully. Only the owner can remove the club from MyDancr through Club participation. Read the confirmation: this removes club participation, affiliations and check-in access, not the dancers' personal accounts or media.

Check: The advertised offer and the club agreement agree, and authorized people can access finance information.

If something is wrong: Returning after removal requires a new agreement and review. Escalate billing disputes to the platform administrator instead of changing guest outcomes to balance figures.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Review current Club Deal and guest terms
- Request a correction / Support
- Owner or manager: finance view
- Owner only: Club participation
- Remove club from MyDancr

Platform administrator workflow

Separate Admin dashboard

This page is for MyDancr platform staff. A club owner does not automatically have these tools. Work the oldest actionable items first and assign unresolved cases for follow-up.

1. Start at Home. Review Needs attention and live operations. Open the actual queue behind each count; a count alone does not explain the required action.

2. Work Approvals. Review the relevant applications, photos, social links, video and reports. Club-linked dancer media is normally reviewed by the club; use platform tools for oversight, exceptions and escalations.

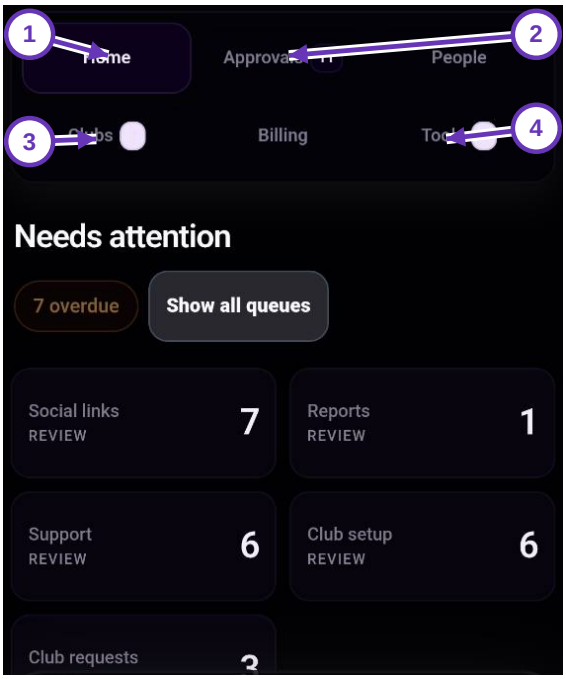

3. Use People and Clubs. People holds account management. Clubs holds club setup, VIP and guest operations, deal attribution, table QR provisioning and sticker inventory.

4. Use Billing and Tools. Billing handles subscriptions. Tools includes support, pickup operations, copyright cases, monitoring and platform analytics.

5. Close the loop. Read the record before an action, wait for its confirmation and verify the resulting status. Preserve a concise case reference and next owner for anything unresolved.

Check: Each actionable queue item is resolved or assigned, with the correct account and venue confirmed.

If something is wrong: Account suspension, publishing, billing and sticker replacement affect real users. Verify identity and scope before using those controls; never approve by queue count alone.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Manager: open the shift

Club dashboard > Tonight

Tonight is the shift command view. The duty manager owns the queue handover, verifies the roster and makes sure guests and dancers receive clear responses.

1. Confirm club and freshness. Check the club name and last update. Use Refresh after returning to an old tab or when a count appears stale.

2. Check Working now. Compare the roster with who is actually on site. Resolve missing enrollment or an incorrect active check-in before promising availability.

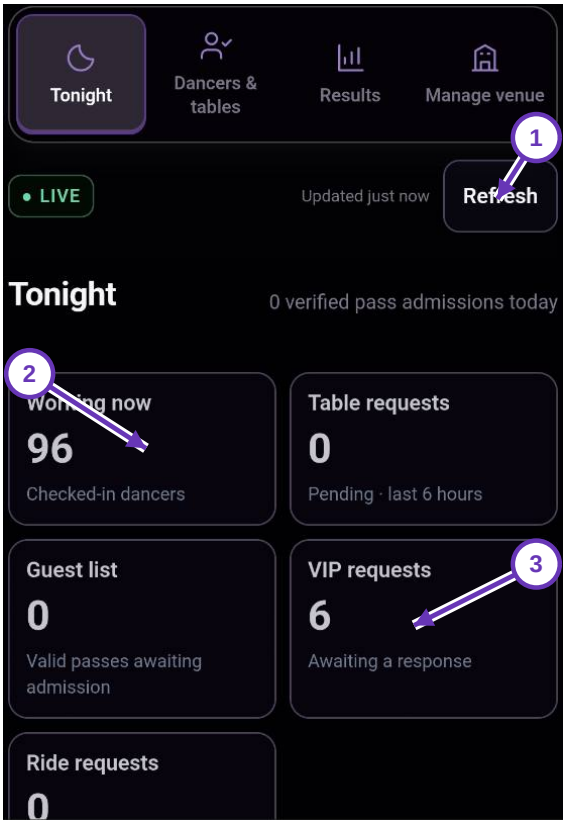

3. Open the request queues. Review Table requests, Guest list, VIP requests and Ride requests. Assign who watches each queue and who covers breaks.

4. Check pending content. Open Dancers & tables > Media approvals if you are the assigned reviewer. New dancers can be waiting for approval after their first sticker tap.

5. Check notifications. Keep the dashboard available even when phone push is enabled. Confirm the account mailbox is accessible and optional email settings have not been muted.

Check: There is a named person responsible for each live queue, and the working roster reflects the floor.

If something is wrong: Sample cards are training data. Do not count them as real guest demand or try to update them.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Manage the dancer roster

Dancers & tables > affiliated dancers / roster

Affiliation means the dancer is connected to the club. Working now means an active check-in. The two are not interchangeable.

1. Find the dancer. Use Search dancers and Sort dancers. Use All affiliated or Working now, and available channel filters, to narrow the list.

2. Open the full profile. Select the portrait or View profile to confirm the person and approved media. Return to the roster for management actions.

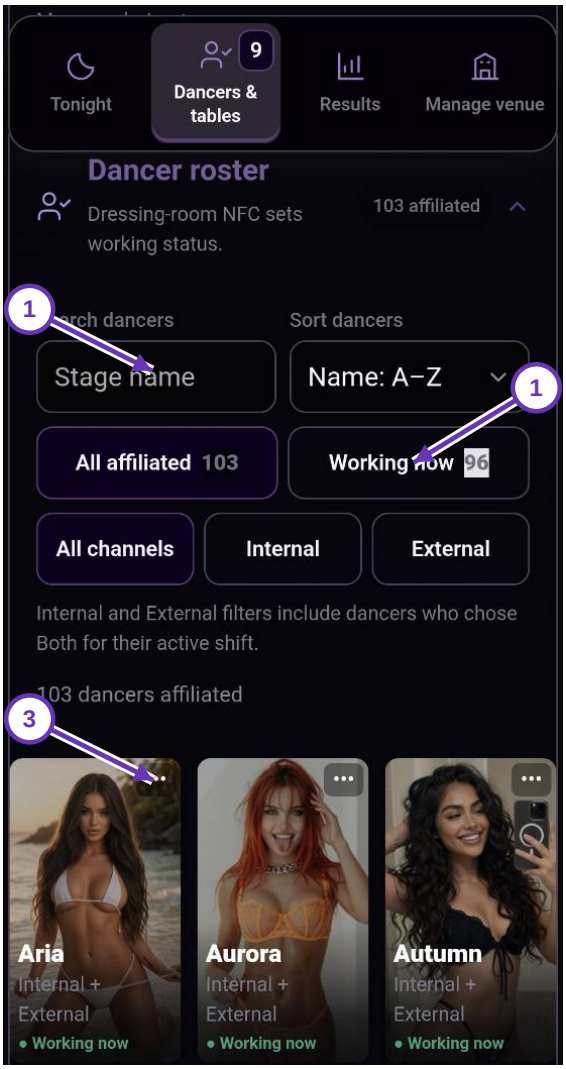

3. End an incorrect check-in. Use the card menu (...) and End check-in when the dancer has left or the active session is wrong. This is different from removing their club access.

4. Remove club access when appropriate. Owners and managers can use Remove access. Read the confirmation and confirm the dancer identity before proceeding.

5. Allow a future return. Find the dancer in Removed dancers and use Allow new tap when the club has authorized their return. The dancer must tap again; this does not start a shift or restore one automatically.

Check: The right dancer remains affiliated, their live state is accurate and access changes have been checked.

If something is wrong: Ending a check-in early does not bypass the cooldown. Do not repeatedly remove and restore access to force a shift.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Handle table requests

Dancers & tables > Table requests

Record what actually happened at the table. A request is an expression of interest; a Seen status is not proof of arrival or service.

1. Identify the request. Check the table label and dancer. Select the portrait to open the full profile. Use the card menu (...) and Request details for the operational record.

2. Acknowledge it. Use Mark seen when the team has received the request and begun handling it. Coordinate with the dancer; the app can also send the dancer operational alerts.

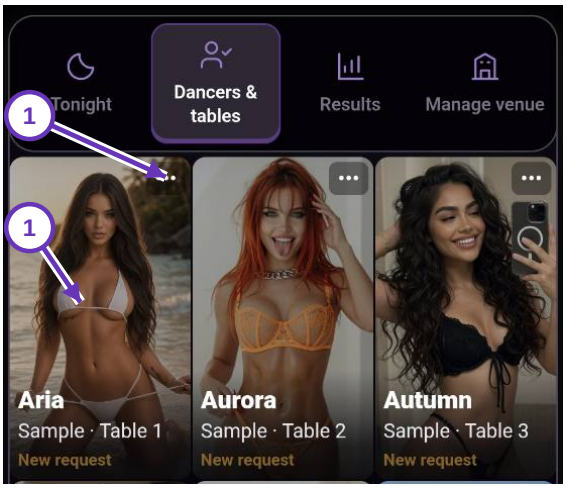

3. Record the outcome. When the dancer actually arrives, use Mark arrived. If the request did not lead to arrival, use Didn't arrive at table.

4. Finish completed work. After arrival and completion, select Complete. Use Dismiss for a request that should be cancelled, following club procedure.

5. Verify the saved state. Wait for the update. If uncertain, refresh the queue and inspect the same request before taking the action again.

Check: The request state accurately reflects acknowledgment, arrival and completion or cancellation.

If something is wrong: Do not mark arrival in advance to clear the queue. Notification read/clear actions do not complete a table request.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Pending > Mark seen
- Seen > Mark arrived / Didn't arrive at table
- Arrived > Complete
- Dismiss cancels the request

Guest list and admission

Tonight > Guest list > Scan pass

A generated pass or guest-list entry is not a recorded admission. Apply the current offer and the club's normal admission checks before recording entry.

1. Choose the visit view. Use Tonight, Choose a date or All active passes. Check the venue timezone when matching a visit.

2. Find the guest. Search the list and use Awaiting admission, Admitted or All. Clear filters if the guest is missing, then Refresh or Load more as needed.

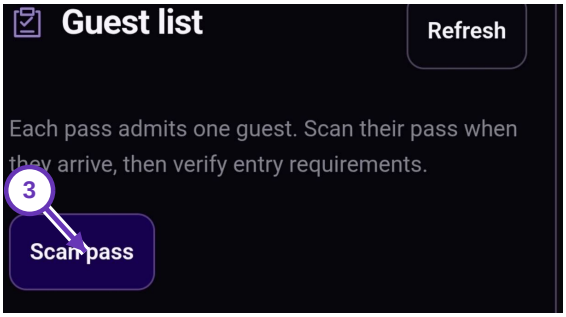

3. Scan the presented pass. Open Scan pass and follow the scanner instructions. Allow camera access if prompted. Confirm the result belongs to this venue and is valid for the visit.

4. Apply the displayed rules. Check the guest identity and the club's age, capacity, dress-code and offer conditions. Confirm any arrival-method restriction before honoring the offer.

5. Record only actual admission. Check the staff verification box only after checking eligibility, then select Admit guest & redeem pass. Confirm Admission confirmed. Each pass admits one guest; Already used must not admit another person.

Check: The admitted guest has a recorded admission, and a previously used or invalid pass is not treated as new.

If something is wrong: If scanning fails, keep the guest-list record and pass result available for the duty manager. Do not invent a new entry or promise an offer that cannot be validated.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Invite and manage VIP guests

Tonight > VIP requests > VIP access

VIP invitations are private. Guests must sign in through the VIP area, not the general club or dancer login boxes.

1. Open the VIP access tabs. Use Requests for visits, VIP guests for existing members and Invitations for outstanding invitations.

2. Invite the intended guest. Select Invite guest, enter the email and optional private nickname, then Send invitation. Check the address carefully; only that invited email can use the link.

3. Direct the guest to VIP sign in. They use their invitation and www.mydancr.com/vip to complete access. Do not create a normal customer or club account for them.

4. Manage outstanding invitations. Invitations last seven days. Resend email and New share link replace the previous unused link. Use Revoke invitation when access should no longer be accepted.

5. Maintain existing access. Search VIP guests and update the private nickname when needed. Remove VIP access only after confirming the member; existing requests remain available for review.

Check: The intended guest has the right club access and can reach their VIP area.

If something is wrong: Never publish invitation or share links. A nickname is a staff reference, not a change to the guest's identity or permission to share their details.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- VIP access: Requests / VIP guests / Invitations
- Guest email + private nickname
- Send invitation
- Resend email / New share link
- Revoke invitation / Remove VIP access

Confirm or decline a VIP visit

VIP access > Requests

Confirming a request is an operational commitment. Check the visit details and the dancer availability before responding.

1. Read the pending request. Use Pending requests or All statuses and Newer / Older requests to find it. Check guest, club, date, time, venue timezone, party and requested dancers. Open the dancer profile if needed.

2. Check availability. Coordinate with the team. Current VIP dancer selection is limited to dancers working now at the selected venue; a selection is still not a guarantee of availability.

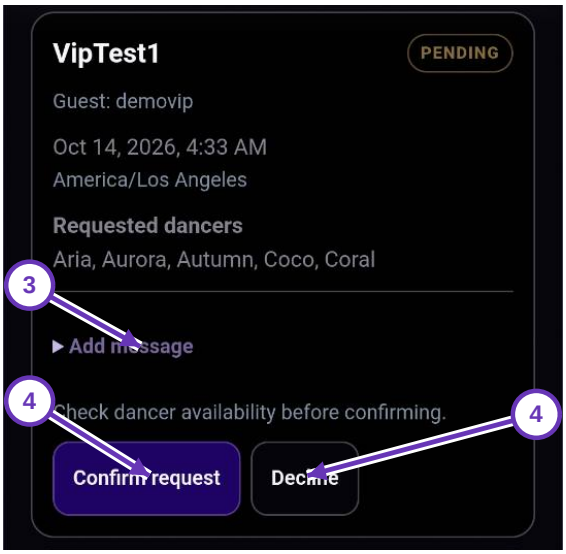

3. Add a clear response. Expand Add message for useful guest-facing details. Keep it concise and avoid sharing internal notes or other guests' information.

4. Confirm or decline. Choose Confirm request only after the check. Otherwise use Decline and give a helpful explanation where appropriate.

5. Handle a later change. Review the confirmed record. Use Cancel confirmed request when the confirmed visit must be cancelled, then verify the new state and coordinate the change.

Check: The request shows the intended decision and the team knows what has been promised.

If something is wrong: A public I'm Going action, a free-entry pass and a VIP request are different records. Do not treat one as confirmation of another.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Ride requests and shared contacts

Tonight > Ride requests / Contacts

Pickup requests use a contact form and a private staff inbox. The customer-facing pickup chat has been retired.

1. Open Ride requests. Use Show rides for Open (last 48 hours), All requests, Completed or Cancelled. Use Load older requests or Open pickup inbox when needed. Owners and managers handle this work.

2. Read the request. Check the guest name, pickup location, party size, phone, email and sharing consent. Confirm the request is for this location.

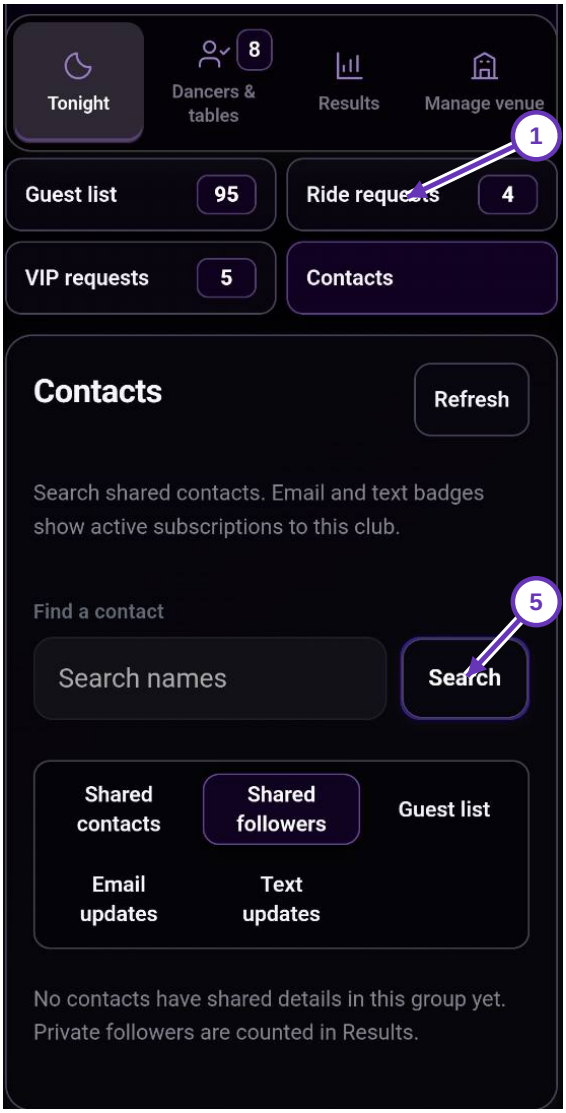

3. Contact the guest directly. Select Call guest or use the supplied email to establish availability, pickup point and timing. A submitted form is not a confirmed ride.

4. Update Ride status. Use Received, Contacted, Arranged, Completed or Cancelled as events actually occur. Wait for the saved result. Coordinate the current offer and transport terms with the team; ride status does not verify club admission.

5. Use Contacts with purpose. Search the shared contact views for authorized guest follow-up. Share details only with the people handling that visit, and respect the displayed consent and access restrictions.

Check: The guest understands whether transport is confirmed and who will follow up.

If something is wrong: Do not look for the old pickup chat or send guests into the private staff inbox. Escalate an unavailable vehicle before promising a collection.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Read manager results and ranks

Club dashboard > Results

Club results help managers understand attendance and demand. Ranking numbers and score details remain available to the club team; do not include them in dancer onboarding materials.

1. Set the reporting period. Choose Tonight, 7 days, 30 days or All time. Keep the same club and period when comparing results.

2. Read the operational totals. Review working time, table-request outcomes, guest-list admissions, VIP demand, customer interest and other available activity sections.

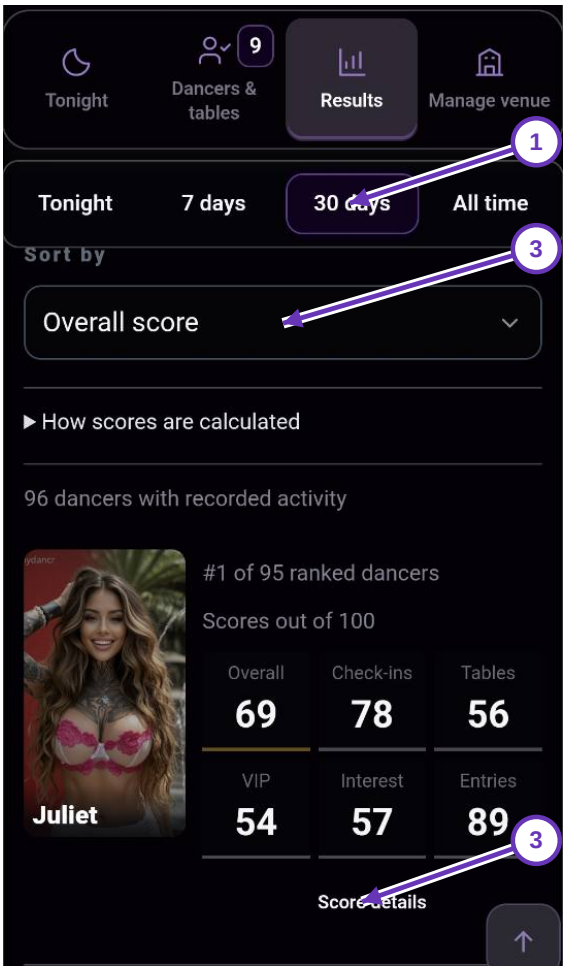

3. Find a dancer. Use the dancer search and sort controls in Dancer performance. Select Score details if you need the manager view of that dancer's results.

4. Interpret the rank carefully. Rank is relative to eligible dancers in that club and reporting period. Ties can share a rank. Early data or Not enough data is not a zero-performance judgment.

5. Coach using observable activity. Discuss attendance, response handling and actual demand with dancers. Dancers see their activity analytics; scoring weights and rank disclosures are not part of their dashboard.

Check: A comparison uses the same venue, dates and definitions, and is supported by the underlying activity.

If something is wrong: Requests, views and intentions are not earnings or verified attendance. The weighted ordering still affects grids and video feeds even though dancers do not see scoring details.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Set notifications and manage the inbox

Manage venue > Notifications / Notification preferences

Email alerts are on by default. Phone push needs permission on each device. Keep an operational queue open during a shift; notifications are an aid, not the queue itself.

1. Review account preferences. Open Notification preferences. Check the relevant venue, VIP, support and performance options available to your role.

2. Keep Email enabled. Check the Email control under delivery methods. Default-on does not reverse a user's later decision to mute optional alerts.

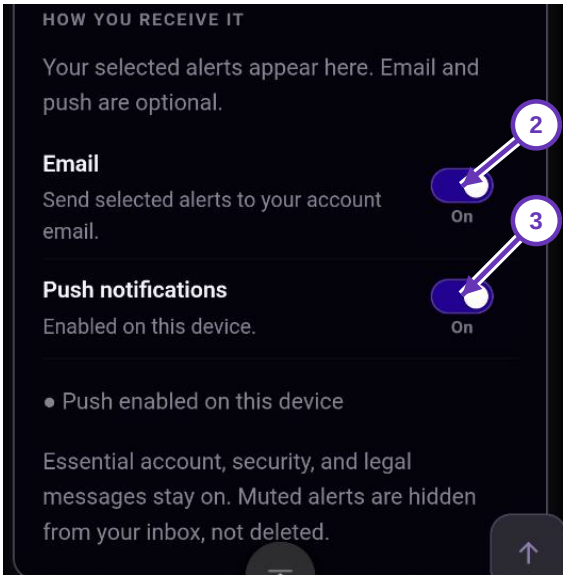

3. Enable device push. Use the displayed Enable notifications flow and accept the browser or operating-system prompt. On iPhone, follow the app's Add to Home Screen guidance and open the installed web app when required.

4. Check the phone mailbox. For email banners, configure notifications in the phone's mail app for the address used by MyDancr. Website push and mail-app alerts are separate.

5. Keep inbox actions separate. Mark all read or Clear all organizes notifications. Return to Table requests, VIP requests or the other operational queue to update the actual task.

Check: The correct mailbox is receiving alerts and the device permission matches the desired push behavior.

If something is wrong: If a phone stays quiet, check device permission, email spam folders and account preferences. Core security and account messages can remain separate from optional updates.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Close the shift and hand over

Tonight > each open queue; Results > Tonight

Use a short written handover so the next manager can distinguish unfinished work from completed activity. This is a recommended operating routine, not an automatic app checklist.

1. Reconcile the roster. End check-ins for dancers who have left. Check that any remaining Working now status is accurate.

2. Reconcile requests. Review seen-but-not-arrived table requests, incomplete arrivals, pending VIP requests and unconfirmed pickups. Update only facts you have verified.

3. Check pending approvals. Leave unresolved media private. Name the next reviewer and explain any missing preview, processing delay or policy question.

4. Record the handover. List club, time, duty manager, open request references, next action and owner. Keep guest contact information inside the authorized systems.

5. Review results and sign out. Check Tonight for obvious recording mistakes. Lock or sign out of shared devices and remove account access promptly when someone leaves the team.

Check: Every unresolved item has an owner, a factual status and a next step.

If something is wrong: Do not clear notifications or mark requests complete merely to make the dashboard look empty. Escalate outages with the affected club, time and record references.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Roster: who is still working?
- Requests: what remains unresolved?
- Media: what remains private?
- Handover: reference + next action + owner
- Shared device: sign out

Dancer: create and maintain your profile

Dancer dashboard > onboarding / Profile

Use one dancer account for your profile, uploads and club check-ins. The Profile workspace uses the same media workflow during onboarding and ongoing editing.

1. Enter your details. Add your stage name and select your city. Stage names must be 2-40 characters. Wait for Saved or Details saved after editing.

2. Build Photos & videos. Add at least three profile photos in total, including a main photo. Pending uploads can count toward completing the setup form; the automatically generated avatar is separate.

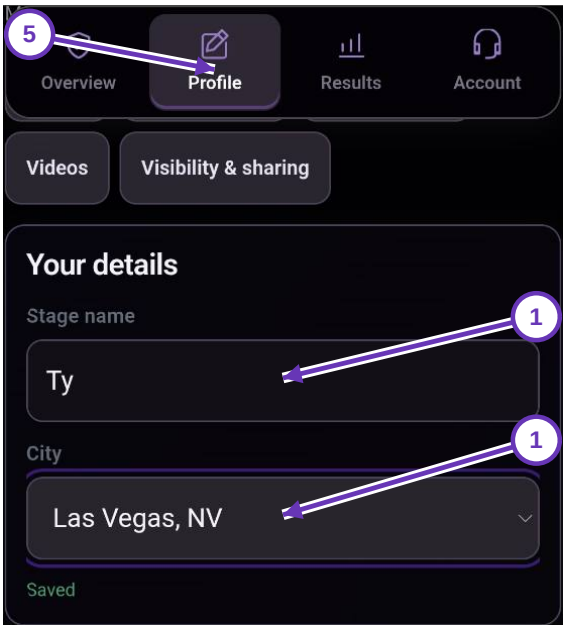

3. Review the preview. Check the person, name, city and image crop before continuing. Uploaded content remains private until it is approved.

4. Complete the remaining steps. Read and accept the agreement, complete any required age verification and use the club's dressing-room sticker to connect your account to that club.

5. Return for later changes. Use Profile for details and media, Overview for working status, Results for activity and Account for preferences and help.

Check: Your details are saved and every onboarding requirement shown by the app has a clear status.

If something is wrong: Finishing the setup form does not mean your media is live. Club review and the remaining account requirements still apply.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Choose the main photo and avatar

Profile > Main photo / Avatar

Your main photo supplies your dancer card and the club's internal roster wherever you choose to appear. The avatar is created from that photo.

1. Choose a main photo. Use the Main photo controls to upload a suitable image or choose an uploaded photo. Select a clear image of yourself that follows the photo rules.

2. Adjust the main crop. Use the crop action and check that the card framing keeps your face visible. Save the crop and wait for its status to update.

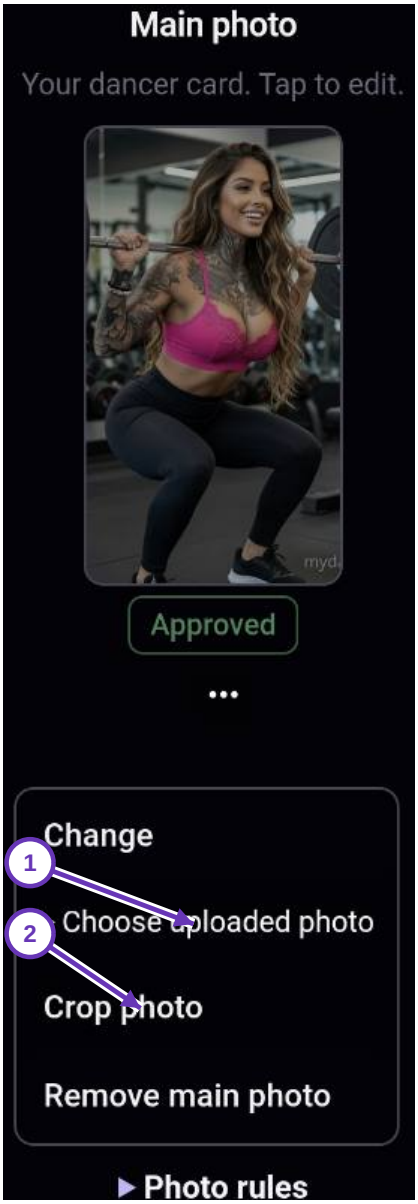

3. Check the automatic avatar. The app creates the avatar from your main image. Adjust its crop if needed; you do not need a separate avatar upload.

4. Wait for review. A changed main image or crop can require processing and approval. Previously approved media may remain visible while a replacement is pending.

5. Check the result. Use View profile after approval. Confirm the main image and avatar show the right person and crop on the surfaces where your account is visible.

Check: The approved main image and its avatar are consistent, with no separate club roster image to maintain.

If something is wrong: Do not assume a saved crop has already been published. Check the status and ask the club reviewer about a pending replacement.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Upload and organize photos

Profile > Add photos/videos > Photos

Photos can be selected from your phone or taken with the camera. Read Photo rules before uploading, especially the single-person and no-logo requirements.

1. Choose the source. Select Gallery to choose one or more files, or Camera to take a photo. Accepted formats are JPEG, PNG, WebP, HEIC and HEIF, up to 25 MB per file.

2. Check each file. Only you may appear, including in reflections or backgrounds. Remove visible logos, watermarks, contact details and other prohibited content before submitting.

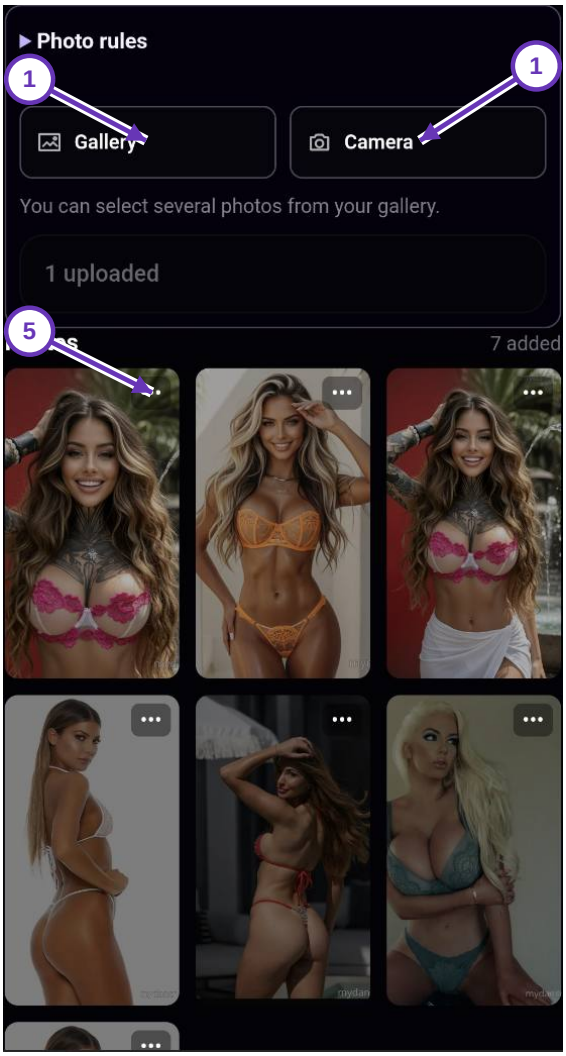

3. Let the transfer finish. Keep the page available until the upload result appears. A transfer failure is different from waiting for approval; use the offered retry control for a failed transfer.

4. Wait for review. Your club receives new-dancer uploads after your NFC tap. Approved uploads can appear where your profile is eligible; pending or rejected uploads do not.

5. Use the photo menu. Open (...) on a photo for the available crop, main-photo, pin or removal controls. Pinning changes your profile gallery order, not the shared discovery or TV order.

Check: Each photo has a known upload/review state, and approved photos appear correctly on your profile.

If something is wrong: For a rejected photo, read the reason and replace the file with a corrected version. Do not repeatedly submit the same unresolved content.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Upload videos

Profile > Add photos/videos > Videos

Videos use the same approval process as photos. The club reviewer must be able to play the complete video and assess its audio before publishing it.

1. Read Video rules. Use a vertical or square MP4, WebM or MOV, 1-30 seconds long and no larger than 25 MB.

2. Confirm permissions truthfully. Check both boxes: only you are shown and the video is of you; and you own or have permission to publish every visual, recording, song, beat and other audio.

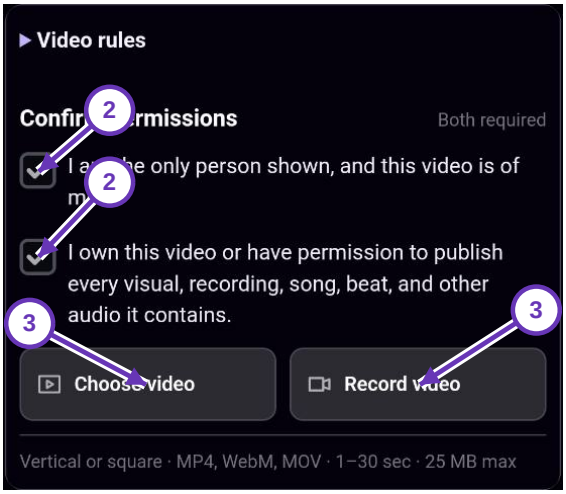

3. Choose or record. Use Choose video for a saved file or Record video for the camera flow. Use any offered trim/crop controls to meet the format and duration requirements.

4. Wait for processing and review. Allow transfer and processing to complete. AI checks assist the reviewer but do not publish the upload. Check the status before assuming the video is live.

5. Verify playback after approval. Open your profile Videos tab and play the approved video. Eligible videos can also enter MyDancrTV; profile eligibility and visibility still apply.

Check: The file plays correctly, has an approved status and contains only permitted visual and audio content.

If something is wrong: Music available on your phone is not proof that you may republish it. If rights or policy compliance are uncertain, choose a different recording.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Agreement and age verification

Onboarding > agreement / Verify 18+

Complete the requirements actually shown for your account. Media approval and identity verification are separate processes.

1. Read the agreement. Open the linked terms, read them and accept the checkbox only if you agree. Use Continue to save the acceptance and move to the next requirement.

2. Check Verify 18+. If the app requires verification, start the displayed Ondato flow. Follow the identity-document and selfie instructions with your own identity.

3. Return to MyDancr. Wait for the result and refresh the onboarding status if needed. Do not submit a different person's document or create a second account to get past a delay.

4. Read the status literally. A Not required label means that step is not required in the current configuration. It does not mean that an identity check was completed.

5. Get help with a problem. Use Account / Help or the displayed support route with your account email and the status text. Keep identity documents within the secure verification flow.

Check: The agreement is accepted and the verification step is completed or explicitly not required by the app.

If something is wrong: A club manager's photo approval does not verify age or identity. Do not ask staff to collect identity photos through ordinary chat or email.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Read agreement > accept > Continue
- Verify 18+ > follow secure Ondato flow
- Return to MyDancr > check status
- Not required is not Verified
- Problem? Use account support

Tap the sticker and choose visibility

Club dressing-room NFC sticker > Choose where you appear

Unlock your phone and tap the club's physical sticker. Open its link if prompted and sign in to your dancer account if asked. No particular dashboard page has to be open first.

1. Confirm the club. Check the location shown at the top. On your first tap, the club connection lets its owner or manager review your pending photos and videos.

2. Choose Internal only. Choose this to appear on this club's roster. Customers can open your full profile from the roster. This choice keeps you out of external discovery for the check-in.

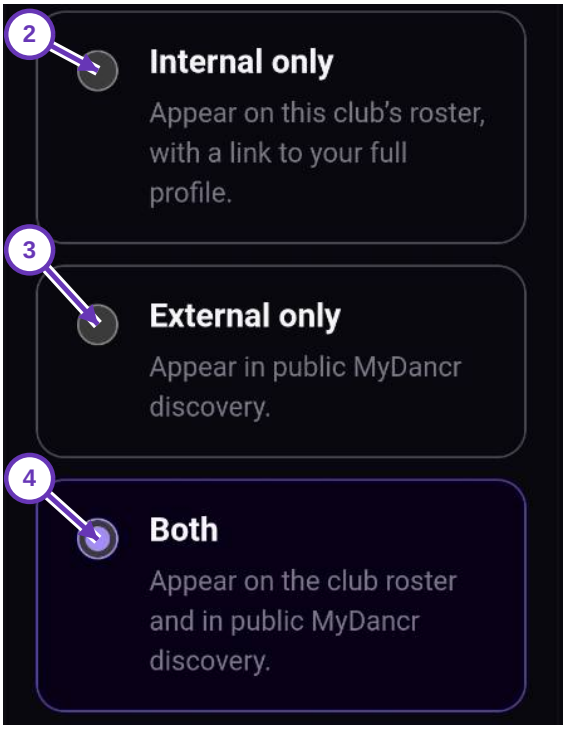

3. Choose External only. Choose this for public MyDancr discovery rather than the club's internal roster.

4. Choose Both. Choose this to appear on the club roster and in public discovery, subject to your account eligibility and profile visibility.

5. Complete the displayed action. Follow the confirmation or remaining requirements. If approval is pending, wait for the club review and refresh your dashboard status when notified.

Check: The app confirms the correct club and your chosen channel, or clearly identifies the remaining approval step.

If something is wrong: An original-account warning can appear on a phone used for another dancer account. Recover the correct account or contact support; do not create repeated accounts.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Manage Working now

Dancer dashboard > Overview > Working Now

Working now comes from a valid club check-in. Keep it accurate so the club and customers can understand your actual availability.

1. Check the active venue. Read the club and time shown in Working Now after tapping the sticker. Tell the duty manager if the club or status is incorrect.

2. Understand the timer. A check-in lasts up to six hours, followed by a six-hour cooldown across clubs. Retapping does not extend it.

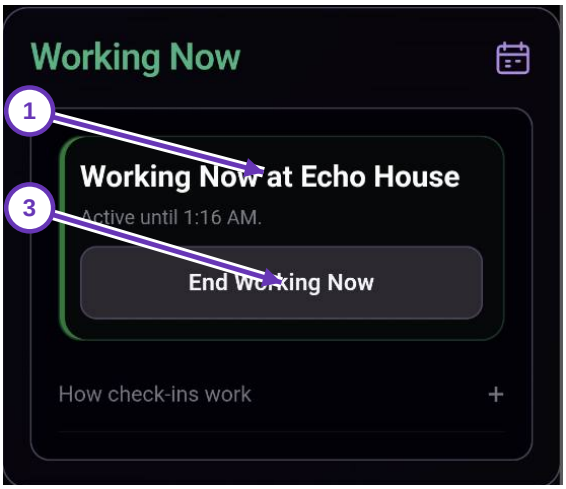

3. End your shift when leaving. Select End Working Now, then Yes, end now. Choose Keep working if you opened the confirmation by mistake. Check that the active state ends; a club team member can also end it when needed.

4. Respect the cooldown. Ending early does not reset or bypass it. Follow the next-eligible time shown by the app rather than repeatedly tapping.

5. Review requests and activity. Read relevant alerts and coordinate table or VIP interest with the club. Use Results for recorded activity; do not promise a booking from an interest signal alone.

Check: Your status reflects whether you are actually working at the displayed club.

If something is wrong: Public profile visibility is separate from check-in status. A Public label does not mean you are currently working.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Control visibility and share your profile

Profile > Visibility & sharing

Visibility controls whether your profile and content are shown. It does not delete your account or replace the club check-in channel choice.

1. Open Profile visibility. Check the current Public or Incognito status. Read the explanation before changing it.

2. Hide the profile temporarily. Select Go incognito to hide your profile and content. Wait for the saved state and recheck the status.

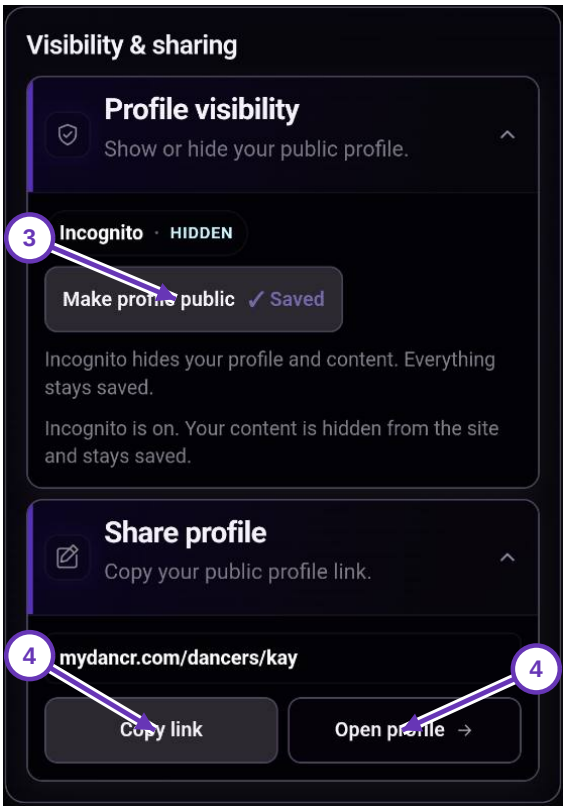

3. Make it visible again. Use Make profile public when you are ready. Approval and other eligibility rules still determine what can be shown.

4. Share the right link. Open Share profile. Use Copy link to copy your public profile URL, or Open profile to inspect the destination.

5. Verify before sharing. Check the correct stage name, main photo and approved media. A link does not bypass incognito or approval restrictions.

Check: The status matches your intention and the copied URL is your own profile.

If something is wrong: Choosing Internal only for a check-in and turning on Incognito are different actions. Ask the club or support if you are unsure which visibility state is blocking your profile.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Read your activity analytics

Dancer dashboard > Results

Results shows your recorded activity. Dancers do not see rank, score weights or placement scores. You can still use your analytics to understand your work.

1. Choose the period and club. Use This shift, 7 days, 30 days or All time and the available club selector. Check the dates before comparing two periods.

2. Read demand and outcomes. Review table requests, VIP requests, returning VIP requesters and verified entries where available. Request details separates the available sources and outcomes.

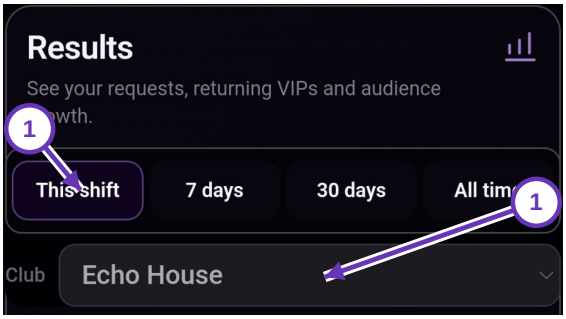

3. Review check-in activity. Check recorded shifts and hours. In-progress activity may not yet be included in completed-session totals.

4. Read audience and content activity. Use profile views, followers, likes, video views, trends and top content to understand what people engaged with.

5. Report a factual discrepancy. Give the club, time range and the activity you believe is missing. A screenshot of the selected filters helps support reproduce the view.

Check: You can explain the time period, source and meaning of the figures you are looking at.

If something is wrong: A request, profile view or I'm Going signal is not proof of attendance, a confirmed booking or earnings. Allow recent activity time to update.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Dancer alerts, account help and retries

Overview > notifications; Account > preferences / help

Keep your account email accessible. Email alerts start on by default, and phone push requires permission on the device you use.

1. Enable the alerts you need. Use Enable notifications when shown and follow device instructions. On iPhone, follow the Add to Home Screen guidance if required.

2. Check preferences and your mailbox. Review available email and push options. Phone mail-app notifications are separate from website push. Operational table-request alerts can be handled separately from optional activity updates.

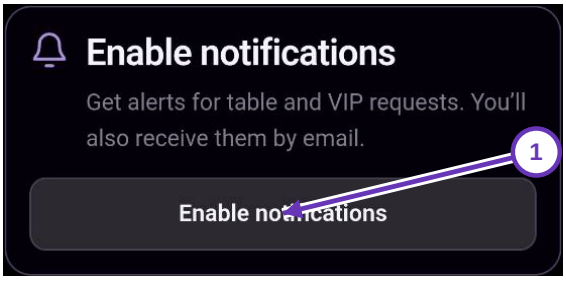

3. Distinguish upload states. Retry a failed transfer using the upload control. Wait for processing when that is the status. For pending approval, ask the club reviewer after your first NFC connection.

4. Correct a rejected upload. Read the reason, correct the file and use the offered replace or upload flow. The replacement needs its own review.

5. Recover or request help. Use Forgot password? / Forgot email? for access recovery. For support, include your stage name, club, time, device and exact message, without passwords or identity documents.

Check: You know whether the next action belongs to you, the club reviewer or account support.

If something is wrong: Repeatedly uploading the same file or creating another account does not resolve a review or account-binding issue.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

Open the media approval queue

Club dashboard > Dancers & tables > Media approvals

All dancer photo and video uploads require a human decision before publication. AI findings support that decision. Assign this work to an owner or manager, not a staff account.

1. Confirm reviewer access and club. Sign in with the authorized owner or manager account. Confirm the club identity, then open Dancers & tables and Media approvals.

2. Refresh the queue. Select Refresh and check the pending count. New dancers enter this club queue after their NFC tap; an unconnected dancer may need onboarding help first.

3. Check the exact item. Read stage name and the Photo, Main photo, Avatar or Video label. Inspect the actual preview rather than assuming it matches an earlier version.

4. Read the AI status. Check AI checks running / passed, AI flagged this upload or AI needs a manual review. Expand AI findings when present.

5. Work every page. The queue displays up to 12 items per page. Use Previous and Next; returning to the first page after a decision is normal.

Check: You have the right dancer and asset version, a usable preview and enough information to make a decision.

If something is wrong: Do not approve a missing preview or a still-processing item. A passed AI check is not an approval and is not proof of age, identity or rights.

App screenshot - owner supplied. Numbered arrows match the steps. Earlier layout; current instructions take precedence.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Dancers & tables > Media approvals
- Refresh [pending count]
- Stage name - Photo / Main photo / Avatar / Video
- AI status > AI findings
- Review note
- Approve Reject
- Previous Next

Review a photo before approval

Media approvals > photo, main photo or avatar

Review every image at a useful size. The same content rules apply to the main photo, avatar and gallery images. Club branding permission does not waive dancer-upload rules.

1. Check who appears. The uploader must be the only person shown, including backgrounds and reflections. No minors or other people are allowed. Escalate uncertain identity or age rather than guessing.

2. Check permitted coverage. Bikinis, opaque lingerie, thongs and cleavage can be allowed. Nipples, areolas, genitals and anus must be covered. Exposed buttocks can be allowed; sexual activity and masturbation are not.

3. Check the whole frame. Look for brands, logos or watermarks on clothing, accessories and backgrounds; contact, social or payment details; phone numbers, email addresses and QR codes.

4. Check other prohibited content. Reject sexual solicitation, drug use/sales, graphic violence, weapon threats, self-harm, hate, harassment, coercion, non-consensual content or deceptive impersonation.

5. Decide on the actual preview. Check AI findings and the final crop. If the file complies and Approve is enabled, select Approve. Otherwise add a specific Review note and Reject, or leave it private while escalating uncertainty.

Check: The saved decision applies to the image you inspected, and an approved crop is suitable for its intended display.

If something is wrong: Do not infer consent or ownership from a good-looking image. Escalate suspected impersonation or disputed rights to the platform team.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Inspect full image + final crop
- Only uploader; required coverage
- No logo / watermark / contact details
- Read AI findings
- Approve OR Review note + Reject

Review a video before approval

Media approvals > Video

Play the entire video with audio. A thumbnail or the first frame cannot establish that every scene and sound follows the rules.

1. Wait until review is possible. Confirm the preview loads and processing has finished. Approval stays unavailable while technical validation or required processing is incomplete.

2. Play from beginning to end. Check every scene, reflection and background for other people, prohibited exposure, sexual activity, threats or other disallowed material.

3. Listen to the audio. Listen for prohibited speech, contact details, solicitation and rights concerns. The uploader must have permission for all recordings and music; ask for escalation if the claim is in doubt.

4. Check format and findings. The upload rules require vertical or square MP4, WebM or MOV, 1-30 seconds and up to 25 MB. Review AI findings and any technical issue; do not bypass a blocked approval.

5. Save the decision. Use Approve only after the full review. To reject, write a specific correction and select Reject. Wait for the success message before moving on.

Check: The whole video, including audio, was inspected and the app confirms the decision.

If something is wrong: Do not approve a silent browser preview without checking whether the source contains audio. Leave unplayable or uncertain content private and escalate it.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Reviewer controls: play full preview
- AI findings
- Review note
- Approve / Reject

Reject, resolve and verify publication

Media approvals > Review note > Approve / Reject

A useful rejection tells the dancer what to fix. Approval releases the media to eligible surfaces; it does not override account eligibility, verification or visibility.

1. Write a specific review note. A rejection needs at least three characters; be much more helpful than that. Example: "A second person appears in the mirror. Replace this with a photo showing only you."

2. Save the decision once. Choose Reject or Approve and wait for the confirmation. The item leaves the pending queue after a successful decision.

3. Resolve uncertain saves. If the request times out or the upload changed, Refresh and inspect the current item before acting again. Do not force a decision on an old version.

4. Review corrected content anew. A replacement is a new review. Inspect the actual new file, not just the old rejection note.

5. Verify the release. After approval, check the dancer profile and the relevant internal/public view. If it is still hidden, check enrollment, required verification, profile visibility and check-in channel with the duty manager.

Check: The queue and confirmation agree, and the content appears only where the dancer is eligible to be shown.

If something is wrong: Approval is not separate for every surface. A published media asset can appear on eligible internal, external and TV views. Do not approve something for one view that is unacceptable on another.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Review note: clear correction
- Reject OR Approve
- Wait for saved confirmation
- Refresh if outcome is uncertain
- Check eligible profile / roster / public view

Review content beyond uploads

Release checklist for all publishing surfaces

Use a human review policy across all content. The application does not give every editable field the same pre-publication queue, so distinguish an enforced gate from an operating check.

1. Dancer photos and videos: enforced gate. New uploads await human approval. Include main images, avatars and gallery media. Existing approved assets are not automatically re-queued; audit them if a full historical review is required.

2. Profile text: operating check. Stage name and city edits save in the profile workspace; do not assume a separate human approval queue blocks every edit. Check live details and report prohibited or misleading text.

3. Social links: platform review. Use the platform social-link approval workflow for pending links. Verify the destination and ownership under the platform process before approval.

4. Venue package: publication approval. Review official information, branding and deal terms through the venue package. Venue image processing has its own rules; the dancer-media queue is not a universal gate for venue logos or covers.

5. Public, internal and TV: release checks. Check the relevant views after a decision. For unsafe live content, contact the platform administrator to remove or restrict it through the applicable controls, and record the reference.

Check: The team knows which controls enforce approval and which areas require a separate manual check.

If something is wrong: A strict product-wide hold on every text or branding edit is not established by this manual. Do not tell staff that every possible change is technically blocked until a reviewer approves it.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Dancer media: human approval required
- Profile text: review operationally
- Social links: platform queue
- Venue package: club publication review
- Existing live content: audit + escalate

Troubleshoot and escalate

Account / Manage venue > Support; platform Tools > Support

Capture the actual state before retrying. Most problems fall into access, processing, approval, eligibility or stale-view issues.

1. Wrong dashboard or account warning. Confirm the email and role. VIP uses /vip. Recover the original dancer account if the phone is linked to it. Ask the owner to check club membership for team-access problems.

2. Upload not visible. Identify the state: failed transfer, processing, pending approval or rejected. Check the first NFC connection, approval result, profile visibility and chosen check-in channel.

3. Queue or profile looks stale. Refresh the relevant panel. Confirm the club, period and filters. If the action outcome is uncertain, inspect the existing record before repeating the action.

4. No email or phone alert. Check mailbox address, spam, optional preferences and device permission. Keep using the dashboard queue while delivery is investigated.

5. Sticker, QR or location mismatch. Record club, table/sticker label, physical placement and the observed destination. Stop using an incorrect sign or tag and ask the responsible administrator to fix it.

6. Create a useful support record. Include role, club, stage name or request/upload reference, local time and timezone, device/browser, expected result, actual result and a cropped screenshot. Never include a password, ID document or private invitation/programming link.

Check: The issue has one owner, enough detail to reproduce it and a safe operating workaround where available.

If something is wrong: For a suspected privacy breach, unsafe live content or unauthorized account access, escalate immediately to the platform administrator. Do not circulate the sensitive material in ordinary team messages.

WORKFLOW & CONTROLS

Procedure reference; not an app screenshot.

- Who / club / record reference
- When + timezone
- Expected vs actual result
- Exact error + safe screenshot
- Owner + next action

Training sign-off and edition notes

Use the matching one-page guide during onboarding.

Before independent use, have the trainee demonstrate:

- ☐ Their correct sign-in route, role and club; how to recover access without creating a duplicate account.
- ☐ Their main workflow using the correct record and a verified saved result, with no real publishing or guest action used just for practice.
- ☐ The difference between a notification, a request, an actual arrival and a completed task.
- ☐ How to recognize pending approval, missing eligibility and a processing failure; who owns the next action.
- ☐ How to create a safe, useful support report and sign out of a shared device.

Trainee: _____ Role: _____

What this edition was checked against

Current local application source, including VenueDashboardPanels, VenueTeamPanel, AdminTableQrCodes, AdminNfcInventoryPanel, VenueNfcTagPanel, InternalRoster, VenueGuestListPanel, VenueVipPanel, VenueValueAnalytics, VenueDancerPerformance, DancerProfileWorkspace and VenueMediaReviewPanel; supporting media rules, access permissions and onboarding/notification documentation.

Source snapshot includes the October 20 club media-review routing and the dancer ranking-disclosure changes. This is a source-verified operating guide, not a certification of production configuration. Age-verification requirements and visible controls depend on the account and current configuration.

Screenshots: owner-supplied MyDancr captures held in the workspace, cropped for instruction and annotated with vector arrows. The connected browser was unavailable during preparation, so newly added controls are shown as labeled references instead of recreated screenshots. Invitation links, passwords and identity documents are not reproduced.

Maintain this guide: Recheck role permissions, approval gates, button labels, upload limits and check-in rules after a release that changes them. Replace older captures with current ones. Do not reuse old screenshots to train on removed features.
