Dancers

Complete role guide

Create your profile, control your visibility and manage your shift.

How to use this manual

Find a task by its reference in the contents. Each procedure identifies where to go, which controls to use, the expected outcome and how to recover.

Orange arrows and bracketed numbers identify the pictured controls. The numbered procedure is the order of work; a control reference such as **[2]** points into the screenshot.

Screenshots are fresh captures of current app components rendered with fictional training data. They show actual app controls, not live guest accounts. Some figures focus on a panel rather than the whole screen.

A guide describes the controls available to the role. Your club, account state and content status can change which controls appear. Wait for a saved result before assuming an action succeeded.

Before any content goes live

Pending dancer media has an app review workflow. For changes without that workflow, the editor must hold publication until the assigned content approval manager records sign-off. The app does not have one universal approval gate for all text, branding and site changes.

Edition and access

21 October 2026. Download current role guides and one-page sheets at www.mydancr.com/guides. Owners/managers can obtain the complete set; dancer accounts download dancer materials.

MyDancr support: support@mydancr.com
Current-shift problems: your duty manager. Media decisions: your assigned reviewer. Team access: your club owner.

D10 Manage alerts account access and help 13

D11 Resolve missing or rejected content 14

Back matter: release log, shift handover and onboarding sign-off worksheets. Role guides include the relevant procedures in full.

Roles access and daily habits

Responsibility	Account/access	Owner of the work
Club Admin team	Club owner; managers where allowed	Club setup, team, offers, website coordination
Manager / talent team	Club manager; staff for limited floor duties	Roster, table/VIP/ride requests and handover
Dancer	Personal dancer account	Own identity, media, visibility and check-in
Content approval manager	Assigned club owner or manager	Media decisions and sign-off for every release
MyDancr platform admin	Separately authorized /admin account	Platform records, QR provisioning and escalation

Sign in to the right workspace

Club owners/managers/staff use club sign in and /dashboard/venue. Dancers use dancer sign in and /dashboard/dancer. Platform admins use /admin. Do not reuse someone else's account. Use the sign-in password recovery control when necessary.

Know the venue navigation

Tonight contains guest operations. Dancers & tables contains the roster, table requests and media approvals. Results contains metrics. Manage venue contains publication, deals, website/TV, team, notifications and account/support.

Read the result

Refresh the relevant panel, note its timestamp, and wait for the success message after an action. If data is stale, unavailable or changed by someone else, reload before retrying. Protect guest details and private links.

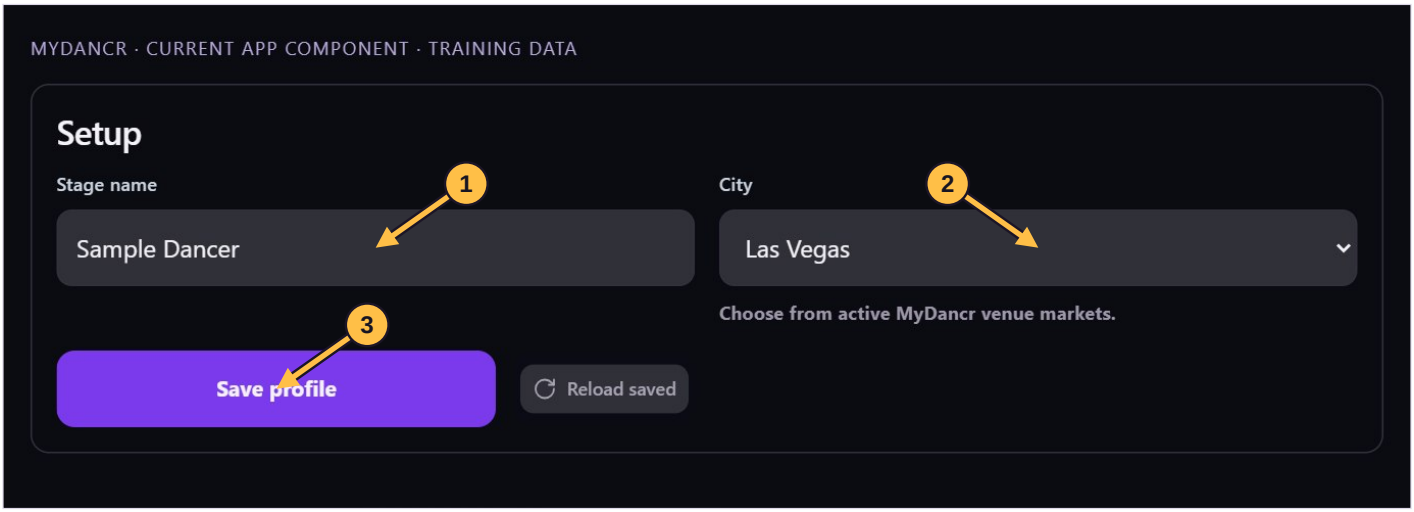

Understand the states

Affiliated does not mean Working Now. Uploaded does not mean Approved. Approved does not guarantee visibility on every channel. Acknowledged does not mean Arrived. A pass claim is not verified admission.

Create your account and identity

GO TO Dancer sign in > Profile > Name & city

Use your own dancer account. Your stage name and city identify the profile; they do not replace the club tap or age verification.

Current app component with training data. Numbered arrows identify controls.

[1] Stage name [2] City [3] Save control

1. Choose dancer account creation or dancer sign in. Use your own email and password, complete any email verification prompt, and keep access to that email.
2. Enter your stage name **[1]** and select an available city **[2]**. The stage name requires 2 to 40 characters. Check spelling before continuing.
3. Save using the displayed Save/Continue control **[3]**. In the guided editor, continue from Name & city to Photos & videos.
4. Add the required main photo and at least three profile photos in total, including the main photo. Your avatar is created from your main photo and does not add a gallery slot.
5. Continue to the Dancer Agreement, complete age verification, then tap the club's dressing-room sticker. The next pages explain each stage.

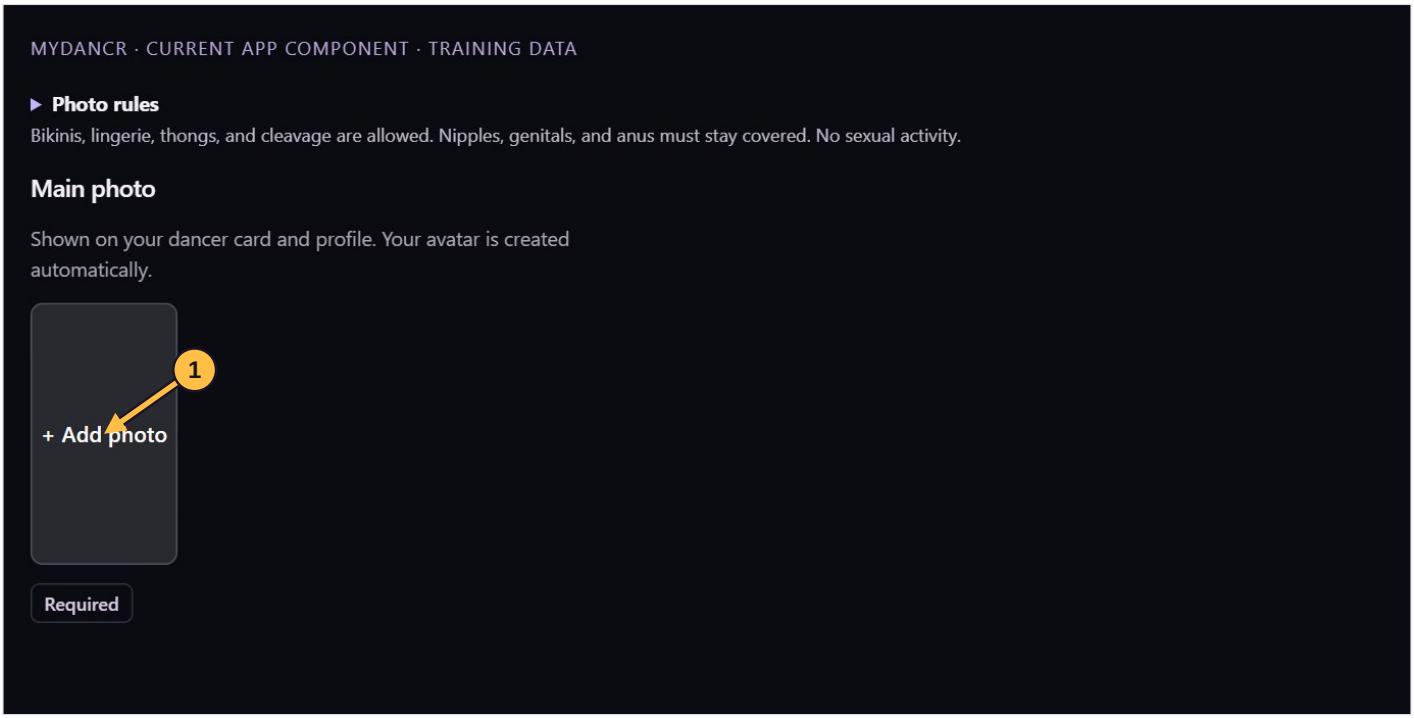

Done when. Your identity is saved and the setup checklist shows the next required step.

If it does not work. If cities fail to load, use the offered retry and wait before saving. For a forgotten password, use the sign-in recovery control rather than creating a second profile.

Set the main photo and avatar

GO TO Profile > Main photo and Avatar

Your main photo appears on eligible cards and helps generate your avatar. Replacing a photo submits new media for review; a successful upload is not publication.

Current app component with training data. Numbered arrows identify controls.

[1] Add main photo

1. Select Add **[1]** in Main photo, or Change/Replace when a photo already exists. Choose a solo image of yourself that follows the photo rules.
2. Use the crop controls to frame the image and save the crop when prompted. Keep your face clear and avoid cutting off important details.
3. Wait until upload and processing finish. Keep the page open while it reports work in progress. Read Pending, Approved or any rejection notice.
4. Check the automatically created Avatar. Adjust its crop if needed. The avatar is separate from the minimum profile-photo count.
5. Where available, Choose uploaded photo lets you select an existing eligible photo as main. Verify the final main-photo selection and the profile after review.

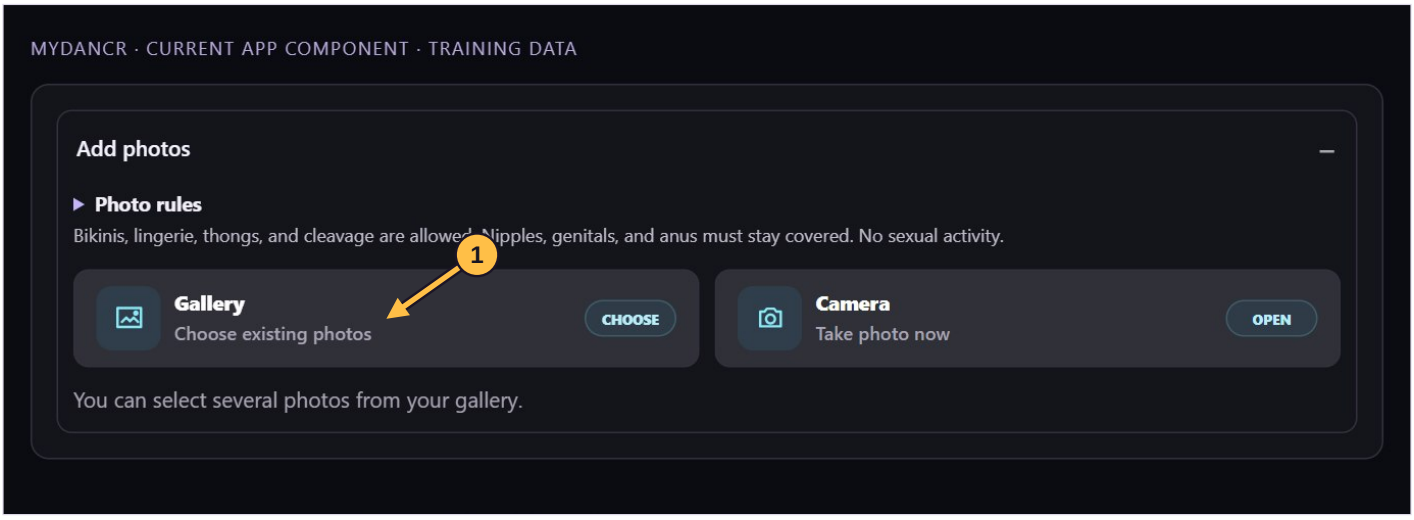

Done when. The correct main image is saved with a clear review status; the avatar crop identifies you accurately.

If it does not work. If upload fails, use Retry main photo upload after checking connection and file limits. If the main photo is rejected, correct the stated issue and replace it.

Upload and maintain profile photos

GO TO Profile > Photos & videos > Add photos

The profile supports up to 50 photos. Initial setup requires at least three submitted profile photos including a main photo; pending uploads count for setup, not public approval.

Current app component with training data. Numbered arrows identify controls.

[1] Gallery photo picker

1. Open Add photos. Use Gallery **[1]** for existing images or Camera to take a new one. Supported uploads are JPEG, PNG, WebP, HEIC or HEIF, up to 25 MB each.
2. Choose solo images of yourself and review the visible Photo rules. Check backgrounds, reflections, contact details and branding before selecting files.
3. Follow the upload/crop prompts. Watch each item's progress and use Retry only for a failed item; avoid reselecting a batch that already uploaded.
4. In the media library, inspect the status of each photo. Use the available crop, pin, replacement or removal controls on the intended item, then confirm the result.
5. Keep the required main photo and enough valid photos for activation. Ask the assigned club reviewer about pending or rejected items and follow the correction note.

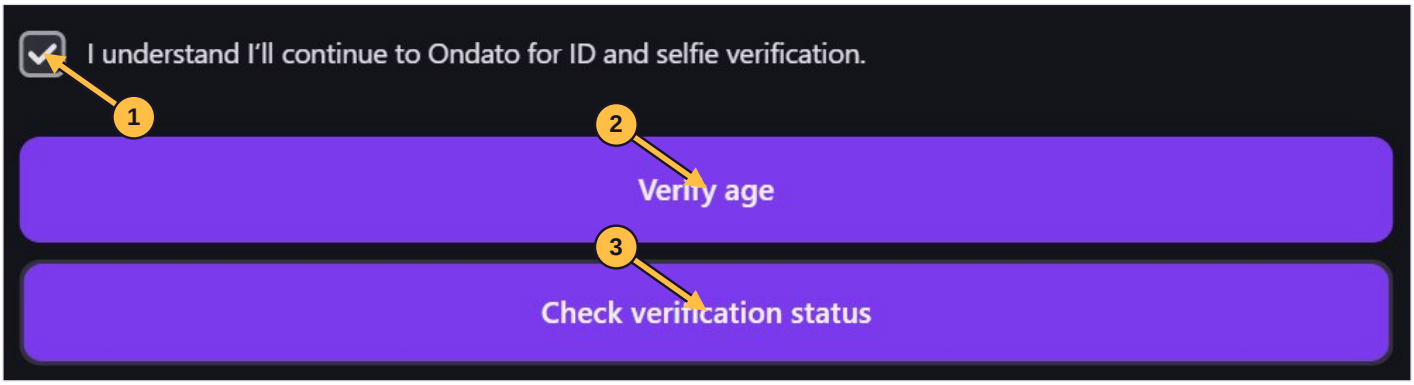

Done when. Your photo count and review statuses are correct, and only approved photos appear to the permitted audience.

If it does not work. If an image is rejected, replacing it creates a new version that needs review. Do not assume removing a pending replacement also removes a previously approved image; check the library.

Accept the agreement and verify your age

GO TO Setup > Dancer Agreement > Verify you are 18 or older

Complete your profile submission and the current agreement before your first club tap. Age verification uses the app's Ondato flow.

Current app component with training data. Numbered arrows identify controls.

[1] Verification acknowledgement [2] Verify age [3] Check verification status

1. Open and read the Dancer Agreement from the setup screen. Select its agreement checkbox only after reading it, then use the displayed Continue/Submit control.
2. Have a valid photo ID ready. On Verify you're 18+, read the explanation and acknowledge that you will continue to Ondato **[1]**.
3. Select Verify age **[2]**. In Ondato, follow the ID photo and live-selfie instructions using your own documents and identity.
4. Return to MyDancr and select Check verification status **[3]**. If the session is unfinished, use Continue verification; if expired, start a new session as prompted.
5. Wait for a verified result before the club tap. An In review result needs time or support, not repeated attempts to bypass it.

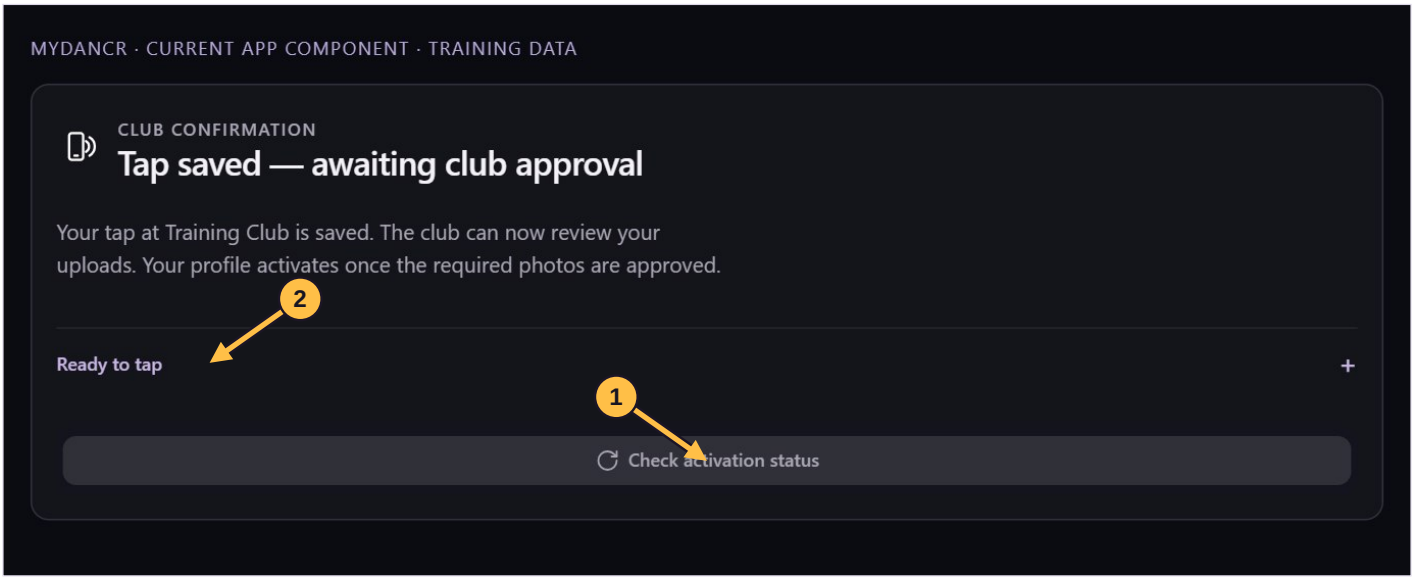

Done when. The current agreement acceptance is saved and age status is verified. MyDancr says it stores the result, not your ID photos, selfie or date of birth.

If it does not work. For a declined or stalled result, read the exact message and contact support. Do not email ID photos or ask another dancer to complete verification for you.

Connect to the club and activate

GO TO Setup > Confirm your club > dressing-room NFC sticker

The first eligible tap connects pending media to the club's review queue. Profile activation and a current Working Now session are related but distinct states.

Current app component with training data. Numbered arrows identify controls.

[1] Check activation status [2] Ready to tap or check-in help

1. Finish identity, the main photo and minimum photos, agreement acceptance and required age verification before visiting the sticker.
2. At the club, unlock your phone, tap the designated dressing-room NFC sticker and open the link. Sign in with your dancer account if prompted.
3. Read the club identity and choose the offered visibility option. Submit the tap flow once and read its result.
4. If the app says Tap saved - awaiting club approval, tell the assigned reviewer. Your required media must be approved before activation can complete.
5. Use Check activation status **[1]** after the club reviews your uploads. Once activated, verify whether you have an active Working Now session; follow the next permitted tap instructions if needed.

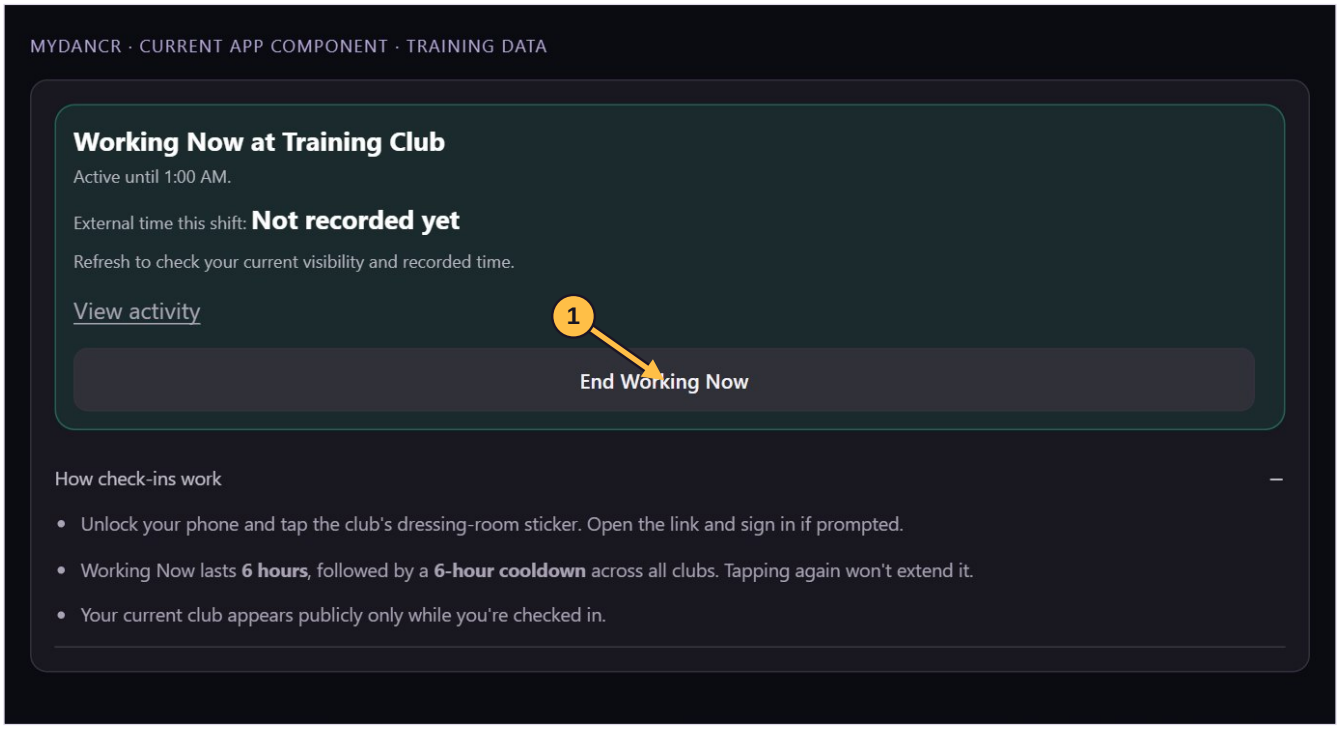

Done when. The app confirms activation/venue access and, separately, the current check-in state.

If it does not work. A saved tap does not mean public content is already approved. If the club is wrong, the sticker fails or setup is blocked, contact the duty manager with the exact message.

Start and end Working Now

GO TO Dressing-room NFC tap > Overview > Working Now

A valid tap starts a six-hour Working Now window, followed by a six-hour cooldown across all clubs. Another tap does not extend the window.

Current app component with training data. Numbered arrows identify controls.

[1] End Working Now

1. Tap the current club's dressing-room sticker and choose Internal only, External only or Both. Read the returned club and status before leaving the tap screen.
2. Internal only shows you on that club's internal roster; External only shows your full public profile without the internal roster; Both allows both audiences. Full approved profile requirements still apply.
3. In Overview, check Working Now and the displayed end time. Switch to Both is offered only for eligible internal sessions with recorded external time. Otherwise choose the audience at your next eligible tap.
4. When leaving early, select End Working Now **[1]**, review the confirmation, and select Yes, end now. Keep working cancels the change.
5. Confirm the inactive status. Ending early does not remove the tap cooldown; check the next allowed tap time before trying again at this or another club.

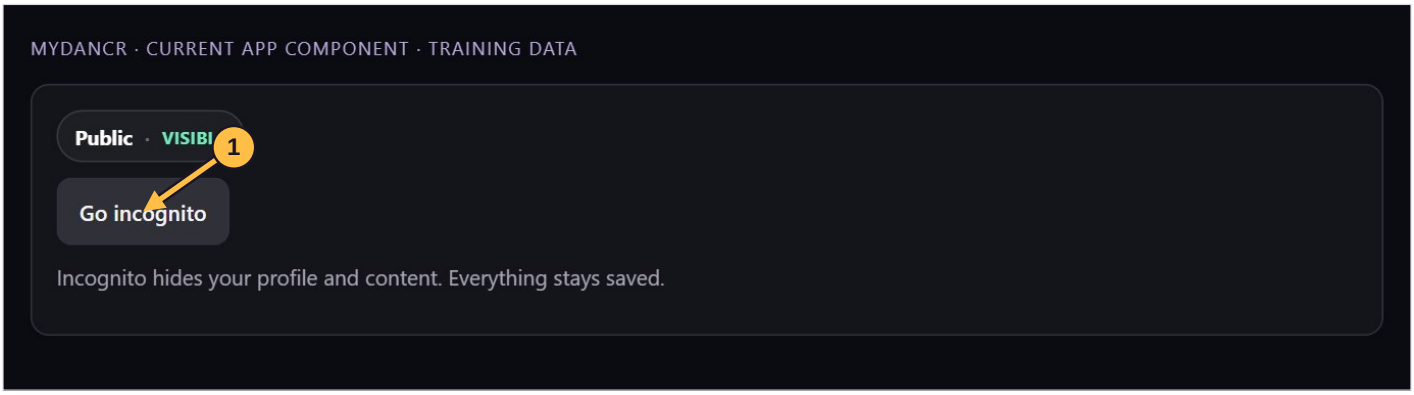

Done when. The shown club, audience and Working Now status match your actual shift.

If it does not work. If a tap is blocked, check setup, age, club access and cooldown messages. Ask the manager to inspect a wrong or stale roster rather than repeatedly tapping.

Control visibility and share your profile

GO TO Profile > Visibility & sharing

Profile visibility is separate from your club check-in. Incognito hides your profile and content while keeping them saved.

Current app component with training data. Numbered arrows identify controls.

[1] Go incognito or Make profile public

1. Open Visibility & sharing and read Public/Visible or Incognito/Hidden before making a change.
2. Select Go incognito **[1]** to hide the profile, or Make profile public to request the public state. Wait for Saved; do not navigate away while saving.
3. Check the displayed result and the intended audience. Being public does not create a club check-in or approve pending media.
4. Use Share profile to copy the profile link. Share only the intended public link and check the destination before distributing it.
5. When returning from incognito, recheck required approvals and your current Working Now/channel choices. Ask the reviewer or manager if a destination remains empty.

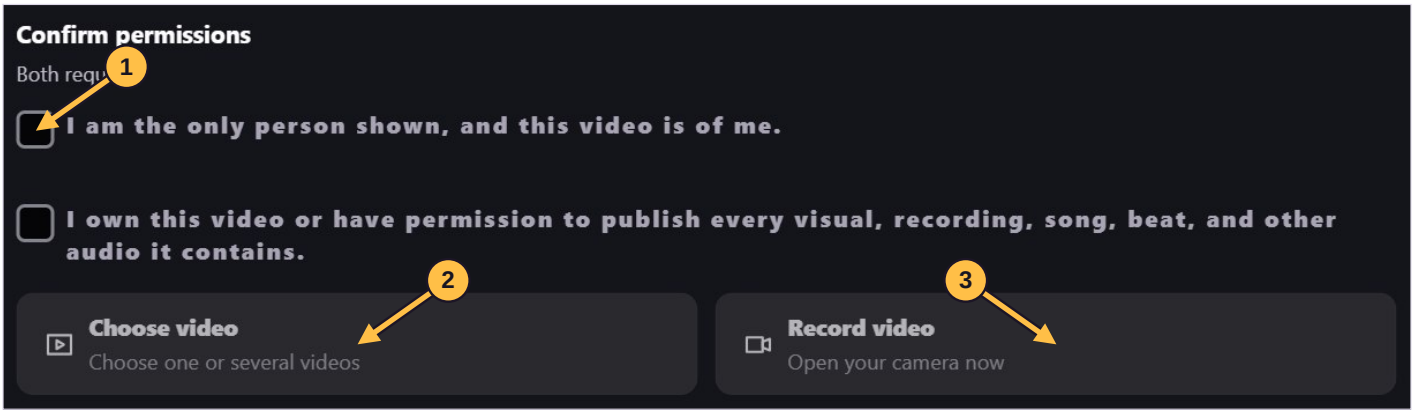

Done when. Your saved visibility matches your intention, and the share link opens the expected permitted profile.

If it does not work. If the app cannot verify the visibility change, refresh and recheck before sharing. Ending Working Now, removing club access and going incognito are different actions.

Upload and manage videos

GO TO Profile > Photos & videos > Add videos

You can keep up to 50 profile videos. Uploaded video output is limited to 30 seconds and 25 MB. Video publication requires review and processing.

Current app component with training data. Numbered arrows identify controls.

[1] Confirm permissions [2] Choose video [3] Record video

1. Open Add videos and read Video rules. Confirm both permissions **[1]**: only you appear, and you own or have permission for all visuals and audio, including music.
2. Use Choose video **[2]** for a saved MP4, WebM or MOV, or Record video **[3]**. Follow the trimming/cropping prompts and the displayed limits.
3. Wait for upload and checking to finish. Keep the page open and inspect each selected video's progress. Do not upload duplicates while the first copy processes.
4. Read the status and reviewer note. Approved media can appear only where your profile and audience settings allow; pending media stays under review.
5. Use the intended video's Replace, Remove or pin control when available. A replacement is a new review item. Verify the library and TV/profile after an approved change.

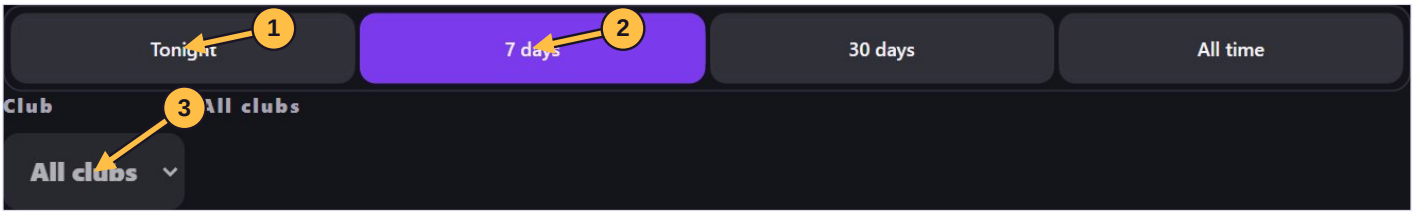

Done when. Each video has a known status and only the approved version is released to its permitted destination.

If it does not work. For a failed upload, use that item's Retry. For a rejection, correct the footage or rights issue; do not keep submitting the unchanged file.

Review requests and performance

GO TO Dancer dashboard > Results

Results helps you understand requests and audience activity. Staff coordinate club table and VIP requests; a number in your results is not a guaranteed assignment.

Current app component with training data. Numbered arrows identify controls.

[1] Tonight [2] 7 days [3] Club filter

1. Open Results in the dancer dashboard. Choose This shift, Tonight, 7 days, 30 days or All time when available and note the period/time zone.
2. Review the In club, VIP and Public site views. Select a club where that filter is offered so you compare the same audience and location.
3. Open request details from the available request metrics. Check the relevant shift/window and ask the duty manager about operational follow-up.
4. Review audience growth, profile/video views, top content and trends. Use the same reporting window for comparisons and distinguish views from requests or completed visits.
5. Discuss unusual counts or missed requests with the manager. Include the period, club and record reference in a support report if the data cannot be reconciled.

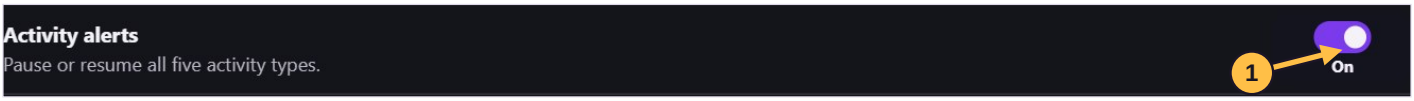

Done when. You can explain which audience, period and club the displayed results describe.

If it does not work. If results are loading or unavailable, retry the affected panel. Do not read unavailable values as zero. A current-shift view may fall back to seven days when there is no active shift.

Manage alerts account access and help

GO TO Dancer dashboard > Account

Keep your own login and notification preferences current. Account controls affect access; use profile visibility if the goal is simply to hide saved content.

Current app component with training data. Numbered arrows identify controls.

[1] Activity notification switch

1. Open Account and the notification settings. Set the overall activity-alert preference, then followers, profile likes, photo likes, video likes and shares as needed.
2. For phone delivery, follow the separate device notification setup. Read the browser guidance and permission result; a category preference alone does not enable phone push.
3. Use Account & security to review the current account state and any pause/resume or deletion controls. Read the displayed consequences before confirming a permanent change.
4. For help, use Support with a subject, exact error, time, affected club and upload/request reference. Your club reviewer handles correction notes; the duty manager handles current-shift issues.
5. To stop a club relationship, open Venue access and select Remove for that club. Read the warning: a future Working Now session there requires a new eligible dressing-room tap.

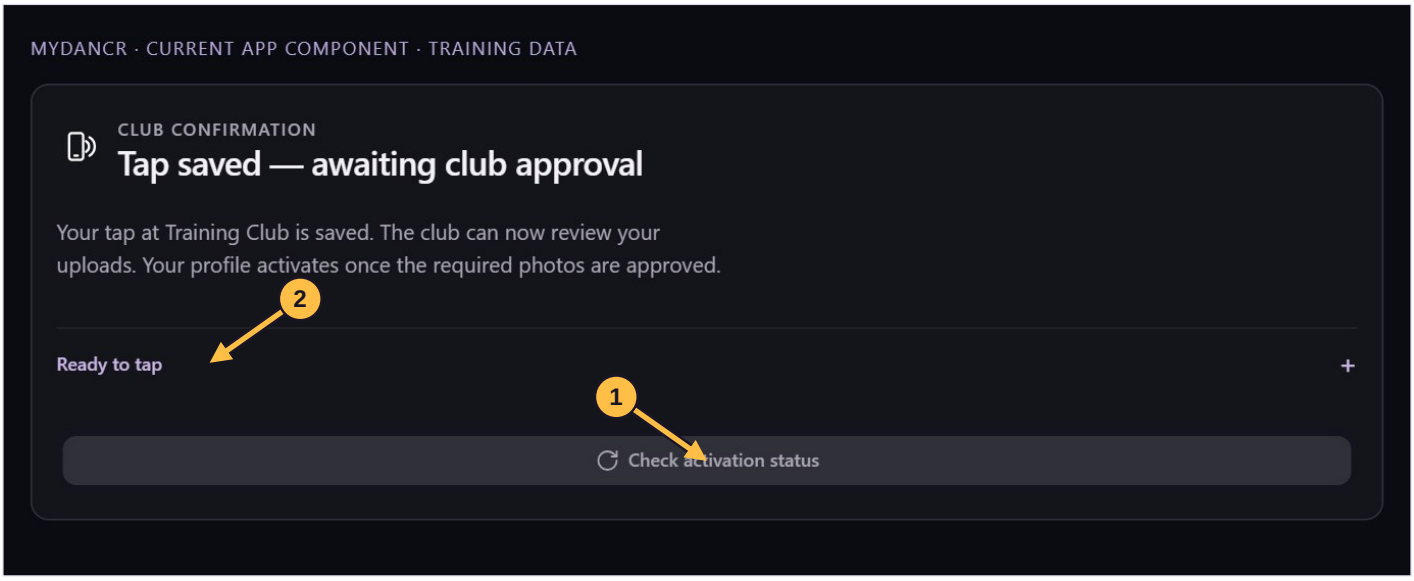

Done when. Your settings are saved, the right person owns any open issue, and your account stays accessible to you.

If it does not work. Recover a forgotten password from sign-in. Do not share passwords, verification documents or private invitation links in messages or screenshots.

Resolve missing or rejected content

GO TO Profile media status > club reviewer > Support

Follow the item's status rather than guessing from the public page. A profile can be active while a new replacement remains pending.

Current app component with training data. Numbered arrows identify controls.

[1] Check activation status [2] Check-in help

1. For a missing setup step, check saved name/city, a main photo, at least three profile photos, current agreement acceptance and required age verification.
2. For pending club review, confirm the eligible club tap was saved, then ask the assigned reviewer to inspect the queue. Use Check activation status **[1]** after the decision.
3. For a rejected item, read the reason and correct the specific issue. Submit a compliant replacement and wait for review; your private upload preview is not proof of publication.
4. For approved content missing from a destination, check Incognito/Public, current Working Now, Internal/External/Both and the club's publication state.
5. For failed processing or an error, record the item, time and exact message. Retry only when the app offers it and send persistent failures to support.

Done when. The blocker is identified and the next action belongs to you, the club reviewer, the manager or support.

If it does not work. Never use another person's account, repeatedly retap during cooldown, or resubmit unchanged rejected media as a workaround.

KEEP WITH CLUB OPERATING RECORDS

Onboarding and handover record

Complete a separate record for each release or open shift item. This worksheet is an operating record, not an additional screen in the app.

Trainee role club and training date

Trainer and account access verified

Tasks demonstrated and remaining practice

Duty manager content reviewer and backup

Open item reference and last confirmed state

Next action named owner and due time

Incoming manager and handover time

Completion sign off and follow up date

Handover essentials: reference | current status | last action | next action | owner | next check time. Keep personal data and evidence in authorized club records.

Training sign off: can locate the correct workspace, explain the key status differences, carry out the role's routine tasks, recognize a failed save and contact the correct escalation owner.
